Foreword

Let us dispense with the conventional sentimentality that one is accustomed to find under the heading "Foreword" in a volume like this. The Nucleus has been designed to reflect your experiences at school over the last several years with special emphasis on this, your last year at N.J.I.T. Because we are primarily a commuter school and a technical school, we have taken "Transportation" as our theme. We offer this yearbook to you, the graduating class of 1983 as a compendium of your college experience.

1983 NUCLEUS STAFF

Table of Contents

Foreword ......................................................... Upper Left
Thoughts and Visions and Other Picture Postcards .............. 4
Dedications and Tributes ........................................... 18
Things to Get Around In ........................................ 22
A Compendium of Conveyance or Things to Get Around In — Part II ......................... 33
The Parting of the Red Tape ...................................... 48
Clubs and Things .................................................. 64
Fraternities and Things .......................................... 98
Agonistics ............................................................ 112
Class of 1983 ....................................................... 160
Stirring Phenomenon or How we Spent our Summer Vacation ......................... 232
This is the End ..................................................... 248
Advertisements ..................................................... 250
Editors Note ......................................................... 256
Once upon a time, an old high school teacher of mine told me that school was the safest place in the world to be. It is only now that I realize just how important that thought was.
School was perhaps the last bastion of security before one was on their own. School represented protection, as well as education. But not all education came from school, and somewhere buried underneath those words of wisdom I suppose that was what he was trying to say.
Most education is learned by the seat of one's pants, and if a philosopher has not previously said that before, then remember that you heard it here first.

Most education comes by way of the School of Experience. The School of Experience requires a certain amount of street smart values. There are no SAT's, no classes, no text or semi-formal, but plenty of tests.
Does the road wind uphill all the way?  
    Yes, to the very end.
Will the day's journey take the whole long day?  
    From morn to night, my friend.

But is there for the night a resting-place?  
    A roof for when the slow dark hours begin.
May not the darkness hide it from my face?  
    You cannot miss that inn.

Shall I meet other wayfarers at night?  
    Those who have gone before.
Then must I knock, or call when just in sight?  
    They will not keep you standing at that door.

Shall I find comfort, travel-sore and weak?  
    Of labor you shall find the sum.
Will there be beds for me and all who seek?  
    Yea, beds for all who come.

Christina Rossetti
There are many cumbersome ways to kill a man: you can make him carry a plank of wood to the top of a hill and nail him to it. To do this properly you require a crowd of people wearing sandals, a cock that crows, a cloak to dissect, a sponge, some vinegar, and one man to hammer the nails home.

Or you can take a length of steel, shaped and chased in a traditional way, and attempt to pierce the metal cage he wears. But for this you need white horses, English trees, men with bows and arrows, at least two flags, a prince and a castle to hold your banquet in.

Dispensing with nobility, you may, if the wind allows, blow gas at him. But then you need a mile of mud sliced through with ditches, not to mention black boots, bomb craters, more mud, a plague of rats, a dozen songs and some round hats made of steel.

In an age of aeroplanes, you may fly miles above your victim and dispose of him by pressing one small switch. All you then require is an ocean to separate you, two systems of government, a nation's scientists, several factories, a psychopath and land that no one needs for several years.

These are, as I began, cumbersome ways to kill a man. Simpler, direct, and much more neat is to see that he is living somewhere in the middle of the twentieth century, and leave him there.

Edwin Brock
In the School of Experience, job interviews in three-piece suits are the exception rather than the rule.
This year, our dedication takes a change of pace. It is not in honor of an outstanding faculty member, nor a member of the administrative department. It is someone who started eight years ago as a receptionist for the student center. Now she is much more.

She is someone who we have all dealt with during our years at N.J.I.T. and she is the nerve center of the campus. She is the link between the students and the "powers that be". Indeed she symbolizes what the student center is.

As a mother of four children who have gone through college, she understands the problems students face. She tries to help, advise, direct, and befriend.

It is for this, your friendship and your wisdom, that we dedicate the 1983 Nucleus to you Rose DelVecchio.
A Tribute to Glenn Wrigley;

Our inkslinger, our visionary, even by the dawns early glow he is putting words of wit down in print. He is a many faceted young fellow, with experiences most people wouldn't dream of.

But seriously... Without Glenn's thoughts, ideas and dedication, this book would not have been possible. Thank you Glenn.
Year after year, the faces change as do the personalities. Despite these changes, the goals always remain the same. The space they occupy, although physically unaltered, is left with an indelible mark in our minds.
... Get Geared for Cycling
Name Your Poison
The first time I ever encountered the NYC Subway system was back in my first year of architecture. My instructor sent me to analyze a painting at the city’s Guggenheim Museum. It seems that I loused up the directions and wound up in Coney Island. The day was not a total loss though. I got to ride the Cyclone for the first time.
A Compendium of Conveyance or Things to Get Around In — Part II

MGB Conv. 71 MGB Cony., 2 dr. rd., r&h, w/w, gr. eng., bod. perf., $1500, 555-1212

Motorist going broke, convulsing
2 dr. rd. — Too dumb to resist rotten dilapidation
Rattles and heaves
Wheels wobble
Greasy engine
Body perforated with rust holes

A Compendium of Conveyance or Things to Get Around In — Part II
The first car I was ever able to call my own was a beaten up yellow Mercury. The car was big as a mobile home and for six months it was exactly that. It was dubbed the "Yellow Submarine", most noted for my friends favorite lunchtime treat (it was also our dining room). They say there is a certain romantic bond of attachment between a man and his first car. I can safely say ours was a love/hate relationship.
Buying a used car was an education. It taught me never to do it again. This next car had lots of character (and plenty of rust). On top of the air cleaner was this printed message, "This assembly should be replaced every 50,000 miles." I found out later that they were referring to the whole engine. The car had two speeds, too fast and too slow.
Now my old station wagon had its own special habits. It had "climate control" ventilation, which was a dandy little device in which as soon as the inside temperature reached 50 degrees, the heater would send up some heat. By the time you were sweating and the temperature inside reached a balmy 85 degrees, the heat would shut off and the air conditioner would turn on. Then the temperature would once again plummet down to 50, thereby turning on the heat again.
I once considered the purchase of a brand new car. It listed for $5,195, but I decided that I wanted a few "options". I wanted some paint, four tires, seats, a floor, and since I was going that far, I figured an engine would also be very nice.

What always astounds me is the wide variety of automobiles to choose from. Go to just about any parking lot and I doubt you will ever find two cars that are quite the same.
In no time at all I officially became a college student driving an official college student car. Not too long after that I received my very first official parking violation. I had now been baptized, and suddenly my eyes began to notice little signs that were now bigger than life.

Students at NJIT are known for their wide and often varied methods by which they arrive at school. To that end, the parking lots around here tend to run to the garish.
I've got those Conrail Blues
Down from my head to my shoes
I'm at the station by eight
But yet the train's always late
I've got those Conrail Blues —
Those Conrail Blues

I've got those Conrail Blues
Always the same bad news
The train is dirty and cold
"It's being fixed" I am told
I've got those Conrail Blues —
Those Conrail Blues

I've got those Conrail Blues
From just expressin' my views
They charge eight-fifty round trip
I'd get there faster by ship
I've got those Conrail Blues —
Those Conrail Blues
Today's more health oriented society considers a light exercise program, such as jogging, a good way for one to pick themselves up and get back into shape. After several weeks of "intense physical training", I can truthfully say I am a physical wreck. All of these exercise programs include some calorie counting hints for dieting. This means that in exercise, there is a lot of math involved. I don't like quantitative trigonometry in my exercise program. It makes me nervous and fat.
After all, what can fifteen minutes of jogging do to hurt... read on.

1. **Jogging gives you a new lean look to your legs:** I certainly notice a new lean look to my hip pocket. Jogging for status seekers can be expensive. Everybody needs "the look" which includes a double knit Addidas suit with matching sneakers, Calvin Klein sweatbands, and a combination stopwatch/pedometer guide that gives your heart rate, pulse rate, checkbook balance, etc.

2. **Jogging is good for complexion and posture:** After running in 10 degree weather, my complexion is a nice shade of blue. As for the posture, standing straight and erect enables me to reach tree branches, clotheslines, car antennas with incredible ease.

3. **Jogging can cure insomnia:** This is quite true, but the timing is not always right. Of course nodding off at parties and social gatherings makes good conversation, however the excuse that you are "experiencing physical fitness" starts to wear thin.

4. **Jogging eases tension:** That depends on the neighborhood you jog in. Most Central Park joggers operate switchboards by day to relieve the tension of jogging.

5. **Jogging is marvelous for the mental faculties:** Then why is it that so many joggers get lost in the suburbs. Take any tract development in America with its winding roads, stick a jogger in the middle and tell him to find his way out and you have just recreated one of those rat mazes the army used in psychological testing in the fifties. Smart joggers always leave a trail of bread crumbs.

6. **Jogging is good for sex:** Not if you have cured insomnia (rule 3).
Those of you who are familiar with the 1982 Nucleus have no doubt seen this face. In fact, chances are you saw this face no less than 17 times in last year's book. We don't mind this really, nor did we mind it in 1977, 78, 79, 80, or 81. This is our friend Warren. He has since graduated and things just don't seem right without him. So rather than break with tradition, we are keeping Warren in our book. To save space, however, we decided instead to print Warren's pictures all on one page 17 times, just in case you were keeping track.

Bye' Warren
To all my friends from here to there who for the last five years have made life in the big city far from mediocre, I bid you a fond adieu.

G.W.
THE PARTING OF THE RED TAPE
The overseeing of the day-to-day operation of a college is no easy task. Anyone in the position of Dr. Fenster's responsibility knows well that the key to a smooth-running organization is a well organized and capable staff, in addition to a college president with a sense of judgment and little humor for those long afternoon meetings.

After four full years at the helm of MIT, Dr. Fenster has proven his worthiness in all of the above categories and then some. In a period of rapidly changing times and rapidly shrinking budgets, the administration in conjunction with the students has attempted to bridge budget gaps as well as possible while offering the most comprehensive education available. This is a tough task. But a tough yet flexible administrator can handle the job.
As the School of Architecture undergoes an expansion and modernization of its facilities, the school faces serious questions and challenges regarding the important role of the architect in the world today and how this very young school can best prepare its graduates to meet those challenges.

Sandford Greenfield and his staff are making an attempt to prepare the architectural student for those professional challenges, for as the physical face of the school changes, so does its curriculum.

Dr. Yi-Yuan Yu is about to start his second full year as the Dean of the School of Engineering. His task involves the overseeing of all of the various engineering departments which comprise better than 90% of all NJIT students, a difficult task second only to the running of a college.

As a noted member of his profession, Dr. Yu brings with him all of the much-needed tools of a top administrator. Such talent is a valuable attribute to a top engineering school.
GARY THOMAS
Vice-President of Academic Affairs
(from 1. to r.)
Anne Wright
Assistant to the Dean of Students
Robert A. Hedesh
Coordinator for Evening Students Programs/Fraternity Advisor
Dr. Constance Murray
Dean of Students
Ray Boxer
Associate Dean of Students
Judy Ann Valyo
Associate Dean of Students
The Office of Admissions is perhaps the first and foremost checkpoint for the well-being of a college and its student body. A school is only as good as the people who make up its content. The admissions office selects from thousands of applicants each year those who appear best suited to handle the academic standard set at NJIT.
But more than just a screening device, the admissions office is there to provide the first assistance to the high school student wishing to attend NJIT. The staff acts as a liaison to the many students and high schools from around the country who inquire about the education benefits of the school and the professions they offer.
The Office of the Registrar has always evoked a somewhat forbidding sense of adventure to the average college student. Such a pre-conception is actually a misconception of the important accounting role of the office. The Registrar's Office has available the most up-to-date record possible of your years at NJIT (which in some case may work against you), but often it works for you.
Margaret Sullivan

Carolyn Barrett
One could say that the Alumni offices are the opposite of the Admissions offices, one deals with entering while the other deals with leaving. That's not quite the case.

First, no school ever ran on just its good looks. It runs on money, and also the reputation of its graduates. One of the most important contributions to a college is what its graduates give back to the school in prestige, dignity, and often — alumni contributions which fund expansion of the school.
Now we have all heard countless volumes of cafeteria jokes ever since kindergarten, and I'm sure nobody can recite those jokes better than the cafeteria staff of any school. The food service staff of NJIT earns their keep, however, and no joke has ever stopped anyone from still enjoying a meal (no matter how short one's lunchtime is) at NJIT.

The staff works from sunrise to sunset and they perform one of the most important (and least recognized) tasks at school. For their efforts, this page is for them.

The Student Senate

If one finds themselves a bit tired of running the line of red tape that can often bog down the educational process, the student senate can from time to time cut through that tape (providing none is created at the same time). But it is worth pointing out that the voice of the student senate is a loud one and it has been known to deliver the student body from the administrative wilderness more than once.
The purpose of the N.J.I.T. Amateur Radio Club is to promote an interest in Amateur radio among the students on campus and further their knowledge of its methods and principles.

The Ambassadors is a non-profit service on campus. Its intent is to assist administrators, faculty members, or other student groups with any scheduled activity. Ambassadors provide a valuable support system at the NJIT Graduation exercises in May of each year. An Ambassador will be present to give directions to visitors as well as guided tours. They are also prepared to answer virtually any question that a visitor may have about NJIT. This group is not funded by the Student Senate, but rather it is under the direction of the Dean of Students and the Admissions Office.

The Association of Indian Students dedicates itself to uplift the education level of the Indian student and thereby motivate them to pursue a technological career. In addition, A.I.S. offers to the Indian Student tutoring and counseling as well as aid in the adjustment process of a new campus environment.

A.I.S. also sponsors recreational, cultural, and social activities both for its members and the campus community in an effort to bring into focus the culture, language, and customs of the Indian student to everyone.

The Student Chapter of the American Society of Civil Engineers was founded at Newark College of Engineering on April 13, 1931. Over 50 years later, today’s student chapter consists of 141 members from N.J.I.T.’s Civil and Environmental Engineering Department who are dedicated to the Civil Engineering profession and the services it provides to the community. The National Organization was founded in 1852 and today consists of over 79,000 members who all preach the society’s motto, “Civil Engineering, a People-Serving Profession.”

Audio Club

Deep in the caverns of the N.J.I.T. Center, the ominous heartbeat from 'Speak To Me' governs the lives of a few determined audiophiles. This renegade band of N.J.I.T. students comprises the immortal Audio Club. They are dedicated to the incorporation of high fidelity technology into this institute. The twenty Audio Club members regularly gather in their small corner of earth to educate the masses on all forms of audio equipment usage. The participants of the club protect a sacred library of music, which through its impulses, iterates the history of the organization. This library, comprised of complex electronic and innovative progressive sounds, is constantly expanding to accommodate the diverse musical tastes of today's aspiring professional while simultaneously recording the growth of the club.

Along with advising the public about audio equipment, the Audio Club also offers a free taping service for students, faculty, and fellow student organizations.

Omicron Delta Kappa

Omicron Delta Kappa is the National Leadership Honor Society. Founded at Washington and Lee University, Lexington, Virginia on December 3, 1914, the founders stated that leadership of exceptional quality and versatility in college should be recognized, that representatives of college life should cooperate in worthwhile endeavors and that outstanding students and faculty members should meet on a basis of common interest, understanding and helpfulness.

The NJIT Circle of ODK is sponsoring the following activities for the 1982-1983 school year: toy collection for St. Michael's Hospital, the annual leadership conference, the outstanding Sophomore and Senior Awards and the annual President's luncheon.

PRESIDENT: Claudi Dauerman

The Caribbean Students' Organization, CARIBSO, was formed in the fall of 1975 and has grown both in membership and popularity. The club puts on two major events each year. The Cultural Week, held in April, and the Caribbean Night, in December, always turn out to be successes. In addition to these, the members participate in intramural activities, miniversity, Octobertech and many other events connected with the school. Some of the objectives of the club are: sponsoring seminars and lectures, the Caribbean student aid program, and the establishing of files on historical and contemporary texts.

Chi Epsilon, the National Honor Society for Civil Engineers was founded at N.J.I.T. in 1958 by a group dedicated to maintaining and promoting the Civil Engineering Profession. Scholarship, leadership, practicality and sociability are the fundamental requirements for membership.

Chi Epsilon retains as its motto the Greek letters Chi Delta Chi. These three letters symbolize conception, design and construction. These are the three phases of every creative project.

Membership is a reward for accomplishment. Chi Epsilon is a mark of excellence that is readily recognizable by others. Members, by precept and example, strive for a high standard of professional service.
The Chinese Student Association, founded in 1969, is one of the largest clubs on campus. It is involved in organizing social and athletic activities for Asian students here at N.J.I.T. as well as promoting Far Eastern culture among the rest of the school community. Such events as food sales, the volleyball and basketball tournaments, dances, picnics, and an Annual Culture Night are among the club's most recent successful ventures.
The goal of N.J.I.T. Christian Fellowship is to remain faithful to God's word and to share it with others. Two Bible study periods are held each week in which members are encouraged to read one another the Bible and to take its meaning seriously. The word of the gospel is also spread each week at a book table in the Center in which free literature is distributed.
The Gamma Kappa chapter of Eta Kappa Nu, the Electrical Engineering Honor Society, was founded at NJIT to stimulate and reward scholarship in the field of electrical engineering.

Eta Kappa Nu members engage in tutoring programs and sponsor seminars by engineers and businessmen. The chapter also sponsors plant trips for its members.

The Forensic Society at NJIT is also the Beta Chapter of the National Forensic Honor Society (Pi Delta Kappa). The Society is dedicated to the learning and practical understanding of public speaking. To this end, the group participates in forensic tournaments all over the United States. This year, plans included trips to tournaments in Pennsylvania, Maryland, Canada, New York, and Colorado.

In the next few years, the Forensic Society will play a major role in the education of engineering and architectural students who plan to enter managerial positions. They will also be working closely with the Dean of Students Office in an effort to bring recognition and respect due to NJIT in the area of public speaking.

The Institute of Electrical and Electronics Engineers has made many impressive accomplishments this school year. With the help of Dr. Strano, the IEEE Department Chairman, and Dr. DeLucia, the IEEE Advisor, they strove to make their organization the most professional, successful, and well-run in the institute.

The first senior project seminar of NJIT's history was run by IEEE Secretary Joe Heilmeier. It consisted primarily of a presentation of previous senior projects by Dr. Rose which was presented on video cassettes.

Among the other important and most successful seminars prepared by the IEEE was a Texas Instruments seminar and a Hewlett Packard seminar.

In recognition of the IEEE's recent innovations and service, the North Section Branch of the IEEE has awarded NJIT's chapter with a computer terminal. In addition, membership this year in the IEEE has increased at least one hundred percent over last year.
The Instrument Society of America defines and reflects the instrumentation profession. The ISA membership provides services needed to keep professionals informed of new technological advances in the engineering fields.

ISA membership entitles members to discounts on publications, access to training aids, and yearly references from ISA journals.

Local activities include idea exchanges, programs, lectures and special events. In addition the continuing education program offers short refresher courses, curriculum guides, films, filmstrips, cassette tapes, and lecture notes.

The publication of the 1983 Nucleus is due in part to the dedication and effort of a small (but wiry) group of very talented, and often very gullible people. Without their time and constant attention to good photography, good writing, and talented layout work, such a yearbook as you have before you would not be possible.

Although this year's theme is transportation, the most important thought on the minds of this year's staff was consistency and clarity of presentation, a clean crisp appearance, and above all else thought-provoking photographs that can make you laugh, recollect the past, and perhaps make you even shed a tear twenty or thirty years from now.
Pi Tau Sigma, the National Mechanical Engineering Honor Fraternity, was founded in 1915 to foster the high ideals of the engineering profession, to promote the mutual professional welfare of its members, and to develop in students of mechanical engineering the attributes needed for effective leadership, and the assumption of the responsibilities of a citizen in a democracy.

N.J.I.T.'s Tau Theta Chapter has made dynamic improvements in the recent past. Such improvements include tutoring for all junior and senior mechanical engineering students, sponsoring an Outstanding Senior Award, and representing N.J.I.T. at the national convention of Pi Tau Sigma.

The Portugese Student Association is a non-profit association which was first formed in 1980. The association has participated in Mini-Varsity 1980, 81, and 82 and also participated in the Centennial Celebration of N.J.I.T. during 1981 and 1982.

One of their major concerns has been lack of membership which limits the amount of involvement they have on campus. To that end, membership to the association is open to all N.J.I.T. students regardless of national heritage.

The Ski Club is involved in the study of a certain physical phenomena commonly known as gravity. A dedicated group of students study this occurrence by making distant trips to high mountains. After donning high-tech state-of-the-art anti gravity equipment, they ascend to the summit. Experiments are conducted in order to determine the most efficient means of descending said mountains intact. Some accomplish this with classic style, others with hysteria, a few even go so far as to employ the aid of professional assistance offered by the ski patrol.

When the days experimenting is over, the students’ attention is drawn toward the evening’s social experiments. These are designed to initiate further interaction and discussion between the club members. This is usually done in conjunction with other students or others, commonly known as ski bunnies. This interaction is almost always done during the consumption of highly volatile fluids. Common topics of discussion include: torque required to pop a knee joint, Murphy’s Law, frostbite, who ate the most snow, ice skating, the fracture point of a clavicle specimen under tensile testing, weather, the next trip to...
The Society of Engineering Technologists is a national organization which has awarded NJIT a student chapter. The society welcomes all engineering technology students together and advance their knowledge in the profession. The society also aims to help its members to apply that knowledge to their studies and professional fields of endeavor after graduation from NJIT.

The society helps its members through a variety of teaching aids (audio-visual, field trips, lectures). Members also have the chance to meet personally with professional engineers in related fields for group discussion.

The Society of Manufacturing Engineers is a national organization which awarded NJIT a student chapter in 1978. The Society welcomes all Manufacturing Engineering and Technology Students. The SME Student Chapter aims to bring fellow students together to advance their knowledge in the profession and to help them apply this knowledge to both their studies and related fields after graduation.

This past academic year saw the student chapter attending many field trips to industrial sites. Members also had the chance to meet and talk with many engineers and technologists at scheduled meetings. Films have also been purchased by the society to give members a better understanding of their chosen profession.

The Society of Women Students is an organization on campus whose purpose is to provide resources, support, and opportunities for women undergraduates at N.J.I.T. SWS has put on a variety of programs and activities in recent years. Though these activities are arranged with the interest of women in mind, many men have taken part in them and have enjoyed participation.

A major event that SWS sponsors each year is Women's Awareness Week which is held in April. This is an entire week of events ranging from movies to lecturers and also entertainers. Such events have fostered a close knit feeling among both women and men on campus.
The Stop-in Center is staffed by trained student peer counselors who provide on-the-spot information and assistance to NJIT students. The peer counselors are prepared to talk with students about academic, career, or personal problems. The Stop-In Center can also provide general information about the NJIT campus, the community, bus and train information, etc. If peer counselors cannot answer your questions directly, they are trained to investigate a problem fully and refer students to right channels for information.

Each semester, the peer counselors sponsor the "Academic Success Workshop" which provides freshmen proficienary students with ways of improving their grades. These workshops introduce different study methods, along with applications to engineering courses. This program helps the students to strengthen present study skills.
Alpha Phi Omega, popularly known as A.P.O., is the largest fraternity in the world. It has been on this campus since 1953 and has tendered the N.J.I.T. community with such services as: Used Book Exchange, Calculator Rentals, Lost and Found, Tour Guides, Confer P.H.T. (push him/her through) diploma for spouses of graduates.

A.P.O. also deals with the community by raising funds for the United Way, visiting Senior Citizen Homes and Children's Hospitals.

Student Activities Council is the largest student-sponsored social organization on campus providing many types of cultural, social and recreational activities. SAC is composed of six committees which present mixers, films, trips, lectures and other special events during the day, evening and on weekends.
The Student Society of Construction Contractors, founded in 1978 and sponsored by the building contractors of New Jersey, is N.J.I.T.'s Civil Engineering Technology/Construction Contracting group. Meetings are held bi-weekly, at which local contractors, engineers, and architects are invited to speak. Topics of discussion cover a wide range of subjects. During the spring semester, members hold the annual B.E.A.N.J. dinner.

It is the goal of S.S.C.C. to bring the C.E.T. Group and local professionals together for a heightened awareness of our profession.
Tau Beta Pi, the National Engineering Honor Society, confers honor upon those students who have distinguished their Alma Mater by their scholarship and exemplary character. N.J.I.T.'s Gamma chapter was founded in 1941. The officers for 1982-83 were: Mark Leskowicz, President; Hema Ramaswamy, Vice-President; John Cowley, Treasurer; Bill Cummings, Corresponding Secretary; Frank Loso, Recording Secretary.

The Newark College of Engineering has always been a progressive school right from the very beginning. In 1881, when this glorious institute of ours was founded, one of the first clubs to be organized was WNCE, the campus radio station, years before Marconi invented radio.

"Call it a hunch," said Milton D. Slutzky, the station's first general manager, "but I think this is gonna be a big thing someday." One of the first things WNCE did after waiting for radio to be invented was to run out and buy all of the latest equipment. Much of this equipment is still in use today.

In 1976 WNCE changed its call letters to WJTB when the school changed its name to the New Jersey Institute of Technology after years of declining enrollment under the name Toledo School of Dental Hygiene.

WJTB runs on a regional unassigned frequency of 550kHz in the carrier current mode and plays primarily progressive rock and jazz with public information broadcasting for Newark and the NJIT community.
"With magnitude and direction."

The school newspaper was one of the fastest-growing organizations this year. Last year, the staff consisted of four dedicated members. This year, the staff has grown to over twenty-five members.

THE VECTOR has always been a sell-out. Students played a major part in this year's paper, supplying articles, advertisements and announcements. We print anything and we thrive on controversy. The paper is published every week. There is always something for you to read . . .

"and you gotta love that."

FRATERNITIES AND THINGS
Going Greek
Alpha Phi Alpha, the first black college fraternity, had its genesis on October 23, 1906 on the college campus of Cornell University. At that time, a group of young black students felt that it was of the utmost importance to create a Greek letter fraternity that would reflect the aims and aspirations of the black college community on a predominately white campus.

Since its conception, Alpha Phi Alpha has grown nationally as well as internationally to over four-hundred chapters and fifty thousand members. It has been interrically known since 1945 with known members as the Honorable Thurgood Marshall and the late Martin Luther King as well as many local members who hold important positions.

Alpha Pi Delta

Alpha Phi Delta is the national Italian heritage fraternity. They have been serving the NJIT community for over half a century. They offer a social life which includes trips, sporting events, cultural events, and parties. They rent a house annually at the Sugarbush North ski resort in Vermont during winter break and move to the Jersey Shore for the summer.

They participate actively in all interfraternal and school affairs. Some of their members include Student Senators, Club Presidents, and IFC Officers.

The Alpha Rho Chapter of Alpha Sigma Phi at NJIT is a fraternity with a historic past and a growing future. Since its original chartering in 1915, Alpha Rho has played an integral part in fraternity life at NJIT as well as shaping the scope and direction of Alpha Sigma Phi's nationwide program. In all, there are more than sixty Alpha Sigma Phi fraternity houses including the first one which was formed at Yale in 1845. Among its forty-five thousand alumni since that time are many statesmen, scholars, and public figures from all walks of life.

Theta Chi

Since the chapter’s birth twenty years ago, Theta Chi has always been considered among the leading fraternities. Whether competing in a championship game, participating in an IFC event, or throwing a party, they pride themselves on a job well done.

Part of their success is due to the fact that they are part of a large and well-organized national fraternity. They also receive enthusiastic support from a concerned alumni association, but the main reason for their success is due to the participation of each and every brother in their fraternity.
Kappa Xi Kappa is a very active and versatile brotherhood which enjoys the autonomy of not being affiliated in any way with any national fraternity. They are involved in many social events, and school organizations as well as being involved in community service.

Social events include parties on Thursday and Friday nights, winery trips, hayrides, band parties, camping trips, picnics, and casino nights, and also participation in all IFC sports.

Mack, Flounder, Johnny Boy, Rhoat, Dino, Flash, Nelson, Mark, Buzz, Paul, Chops, Rag, Quack, Kappa — the wonder dog.
Newark may be a rough place to go to college, but if you are looking for women, sports or a social life and most importantly, brotherhood, then check out Pi Kappa Phi.

Apart from most of the other fraternities on campus, we own our own house. We have the campus' largest dance floor and stage, complete with light show and band.

Along with being the highest academic house on campus, we also participate in all I.F.C. sports. Within the last two years we have finished first in basketball and bowling. We also took second in softball and the Greek olympics.

TKE is home to live wires as well as dead-weights and other slow leaks. With all these different personalities around, there is always something to do.

TKE has chapters all over the nation, and you usually bump into a TKE no matter where you go. This may happen at our national convention, on forty-second street, a Dead concert, or a bear/bike rally. TKE’s trip a lot too. There’s our winter ski trip, spring canoe trip and many road trips. No complaints about the social life at TKE; weekly parties, dirt bike riding and banquets are just the beginning. Also, our sister sorority is always finding ways to hold our attention.

But there is also a serious side to TKE. The house, which is full with many engineers and architects, applauds its graduating seniors each year in recognition for their academic success.

Although scholarship is the main objective in the fraternity, Phi Lambda Sigma still finds time to participate in many social events. Aside from the Friday night parties, and the holiday parties, there are Island Parties, Barbeques, Canoe Trips, Pool parties and many other events that they may wish to hold. Besides the social aspect of Phi Lambda Sigma, they participate in sporting events and have managed to field successful teams.

Phi Lambda Sigma does not believe in useless tasks or physical hazing. Their pledge system works to provide a positive attitude toward the fraternity and a better understanding of brotherhood.

They are a local fraternity with dues and rent among the lowest on the campus. They also own their own house and they take great pride in its appearance.
The 1982 NJIT Highlanders posted their best record in four years and qualified for the Eastern College Athletic Conference Playoffs. Highlighting the season were wins over Montclair State College (6-0), William Patterson College (2-0), Drew University (2-1), and top-rated Division II opponents Randolph-Macon College of Virginia (4-0), and Dowling College of N.Y. (4-1).

This year's senior members of the team include Jeff Caputi (team captain), Mostafa Farahani, David Ferrer, Nelson Gralha, Peter Petrou, and Jorge Suarez.

Bowling — Distinguished team and individual honors

Once again the 1983 NJIT Bowling Team is in contention to take top honors in the recently formed N.J. Division of the Eastern Collegiate Bowling Conference. Having already competed in the Penn State Invitational and the Chuck Pezzano Classic, the team is looking forward to a successful season.

This year's squad is continuing a long standing tradition of being one of NJIT's most winningest collegiate sport. Their success is aided this year by the addition of freshmen stand out Laurie Werner who has already distinguished herself as the first woman to compete on the NJIT Bowling Team on the collegiate level.

Top Row, left to right: Dave Violett, Laurie Werner, Mike Finnegan.
Bottom Row, left to right: John Nogrady, Ed Mussi, Bill Soltmann.
The Highlanders won the Metropolitan Collegiate Hockey Conference Division III Championship in 1981-82. The defense of this championship would be impossible in 1983 since last year's impressive 16-2-1 record allowed the Highlanders to move up into the higher competition of Division II hockey.

Coach Joe Hannabach started early to form a younger and stronger team. This year's schedule included many games against Division I teams such as Kean College, University of Southern Connecticut, Rutgers (New Brunswick), and Fairleigh Dickinson.

There were many highlights to this season. Playing large arenas like the Nassau County Coliseum and the Meadowlands Arena provided an emotional sense of pride and publicity for NJIT. A trip to Montreal also helped bolster the team's experience and their spirit.

Not Pictured: Gene Vetrone, Myron Jaremko, Bob Palmieri, Tom Testa, Al Ascione, Tom Dudutis, Gary Canale.
Metro Division III Champions 1981-1982
Nineteen-eighty-three marked the first successful season the downhillers had in their short six-year history. The team held onto first place in their league for half the season and finally winding up in third place.

The team was powered by the senior crew of Ted Paliwoda (Captain), Mike Ticse (Co-Captain), Don Raymond, Pat Regan, Bruce Jankowitz, and Greg Dzula. Other upcoming members that were a force were Steve Weber, Max Piazza, Orry DuBois, Mike Heller, Gregg Abate and Mark McFadden. The team would like to thank the athletic department, all the administration, and our manager Nancy Witsik, you all contributed to a very successful season.

Back Row (Left to Right): Max Piazza, Greg Dzula, Steve Weber. Middle Row, Left to Right: Don Raymond, Pat Regan, Orry DuBois, Ted Paliwoda, Greg Abate, Mike Heller, Mike Ticse. Seated: Mark McFadden, Bruce Jankowitz.
Rifle Team — Seniors lead team to 6-1 record

The 1982-1983 NCE Varsity Rifle Team completed its second best season ever finishing with a league record of 6 wins and 1 loss. Several successful non-league matches were also shot against area schools and also in national competition. Senior members Ray Jablonski, John Larkin, Dave Marks and Bob Maslanka have all climaxed their 4-year intercollegiate shooting careers with some rather respective personal high scores. Returning juniors Pat DeBiasse and Pat Higgins have also worked their own personal brand of magic on the range and they can be expected to lead next year's team to at least an equally successful year. Sophomore John Silva will also aid in that effort, along with Freshman George McEvoy.

Enough can never be said about the incredible success of the team and its members, but credit must also be given to Coach Robert Ketzner and Assistant Coach Ralph Velez. Through their guidance, each and every member has developed into a shooter who commands respect at any match no matter how good the opponent.

The graduating seniors wish the best of luck to next year's team and challenge them to beat this season's outstanding record.
Pistol Team — On the move

The NJIT Pistol team did a lot of travelling this year to compete in matches against good squads. They went to the United States Military Academy in West Point, NY against two first-rate pistol clubs, The Citadel and R.P.I. Also, the pistol team went to Annapolis, Maryland to shoot against the United States Naval Academy.

In spite of all the traveling, the pistol team still came out with a winning record over the course of the season. Top pistolmen included Jim Kebbekus, Maurice Peralta and Larry Schreiber. Upcomers John Nikus and Chun-Pong So should lead Coach Matt Ciesla's team to winning seasons in the near future.
The NJIT Basketball enjoyed another fine winning season under Coach Jim Catalano. One of the few year in, year out winning varsity sports here at NJIT, the basketball team’s highlight of the year was winning the Florida Institute of Technology’s “High Tech” Tournament in Melbourne, Florida. This was the second year in a row that our basketball team became champions of that tournament. Leaders of the team were Sal Gagliardo and Tom Gallagher. Last year, Tom was voted Most Valuable Player in the Independent Athletic Conference as a Freshman. With these two players leading the way and a player like Peter Scheffler to pick up the slack, the NJIT Basketball Team should have many winning seasons in the years to come.
Cross-Country — Excellent individual efforts

The 1982 NJIT Cross Country Team was made up of a small group of dedicated and determined runners. They entered the season without a coach and the benefit of any formalized pre-season training. They did not begin fall practice until the third week of the semester when the coaching vacancy was filled by Henry McCloud. The team went on to compile a 2-9 record. However, over the course of the season, they worked hard and improved every week.

At the Independent Athletic Conference Championship meet, NJIT finished a strong 2nd to Stevens Institute of Technology. The highlights of the meet were NJIT Freshman Doug Troast finishing first for an IAC meet record on the Drew University course in 28:08, Junior Allan Steel placing second, also under the old record, and Junior Paul Calabrese placing fifth, to give NJIT 3 of the top 5 places.

The season ended on a high note with the Highlanders competing in the NCAA Division II Mideast Regional meet where they placed ahead of Stevens Institute, the IAC Champion.

Next year promises to be a very good year for the team. In addition to Troast, Steel and Calabrese returning, Juniors Bill Boyle, Wayne Jones and Tony Robinson along with Freshmen Mike Conner and Peter Sparrock are expected to make strong contributions.
Women's Volleyball

The NJIT Women's Volleyball Team was first formed in August 1982 and although they started out with only a small contingent of players, their popularity grew rapidly and membership soon increased to 15 players.

As an entirely new team, it was important to spend as much time as possible practicing daily. The team has improved with time and are now to take their place in NJIT sports as the first varsity team at school for women.

This ground-breaking is a significant achievement at NJIT and it signals the start of many women's teams which may form in the future.
Back Row (L to R): Dave Denure, Sharon Ingram, Diana Lee, Sherri King, Ran Choi, Kathleen Nagy, Heidi Harting, Regina Rygelis, Mary Ann Mucha, Oleg Moiseeko—Coach.

Front Row (L to R): Becky Miranda, Rosemarie Ronquillo, Hildy Rivera, Rosemary Hicks.

Not Pictured: Arlene McKenna, Eveland Graddy, JoAnne Propsner.
In 1982 NJIT proudly re-introduced an organization absent from the college scene for more than twenty years. The 1983 NJIT cheerleading squad has now grown to 15 members and have now become a permanent fixture (as well as a source of pride and spirit) at many NJIT athletic functions.

Front cluster (l. to r.) John Barnes, Loralei Gas cluster (l. to r.) Alica Fatjo, Joan Apiropoulis, Ba
Baseball Team Swings in '83

Three years ago four Freshmen broke into the starting lineup of the Varsity Baseball Team and have made major contributions, particularly in the past two years. This group will again form the nucleus of a strong '83 team.

Team Captain Jim Tensfeldt is the offensive leader of the Highlanders. The strong armed catcher had led the team in hitting in each of his first three years while also displaying devastating power. Senior center-fielder Michael Smith will again lead a top defensive unit with the quickness and savvy that made All-Conference last year. Smith is also one of the squad’s leading hitters. Flanking him to the right is Tony Tobey. The fleet footed Tobey boasts a rocket arm and a timely bat. Captain Jeff Pruneau will lead the pitching staff. Pruneau combines intelligence and a slick knuckle-curve to baffle opposing batters time and again.

It is a tribute to Coach Gene Schmid that these four players have been able not only to participate for four years in a program as demanding as baseball, but also to excel in a curriculum as difficult as engineering. Of the 20 or so Freshmen who tried out for the team three years ago, these four were the only ones to go the distance.

Another key pitcher is Dan McDonald. This junior throws heat and has the ability to beat even the best Division I schools. At shortstop will be last year’s Freshman phenom Frank Testa. Very capable in the field, Testa has tremendous power at the plate and should again battle Tensfeldt for the team Homerun crown. P.J. DePoreter at third base and Steve Sofman at first will add stability to the infield as will promising Freshman Mike Entwistle and Peter Stauffenberger. Rounding out the outfield will be transfer student Marvin Hurt.
Through all the hard times and hard work, this close knit unit shares many fond memories such as the yearly trips to Florida, the six game weekends, snow in April and rainy Wednesday afternoons. The intestinal fortitude needed to endure this has made men out of those who played and spawned many lasting friendships among them.
Intramural Sports

The New Jersey Institute of Technology supports an extremely active intramural sports program. Nearly every team sport is represented along with individual achievement activities to give the NJIT student an opportunity to compete. This promotes a sense of togetherness and leadership not found in books. The ability to think quickly and act accordingly is a must in any type of sports activity, as well as any profession.

Some of the sports in which individuals compete in the intramural sports program are badminton, Century Club, Weightlifting, and one-on-one basketball. Last year, Mai Amh won the intramural badminton singles championship and teamed with Chet-Bhatt to win the Badminton doubles championship.

The Century Club is an event in which a person, over the course of the academic year, compiles one hundred miles in one of three ways. A Centurion may either run, swim, or bike to the one hundred mark with appropriate distances allocated.

Weightlifting has a number of different classes and the competition is stiff from year to year. In one-on-one basketball, Pete Rossamando narrowly defeated Rich Seminardo for the championship.

NJIT also features team intramurals such as floor hockey, soccer, flag football, basketball, softball, volleyball, and a team track meet before Thanksgiving appropriately titled the "Turkey Trot".

The Turkey Trot was won last year by the Poontangers (that's another thing about intramurals, interesting team names). Last year saw such team names as the Mother Puckers, Ozzie's Raiders, the Stoned Rangers, RIP, and the Little Rascals.
The champions in flag football were the Sacred Cows. Basketball was won by the Bearded Clams. The volleyball crown was taken by CSA (Chinese Students Association). In this year’s highly competitive intramural floor hockey championship (always a favorite at NJIT), the title was won by Raymond Luxury Yacht (the WJTB Radio Station Team).

Congratulations to all of the individuals and teams who competed this year in all intramural sports.
Highlighting this season's play for the NJIT Men's Volleyball Team is the prospect of hosting their own tournament in the early spring. Always striving to maintain the high caliber of play they always had, the team keeps up with a very tough schedule which includes previously nationally ranked Rutgers-Newark.

The volleyball team is supplied with fresh talent to compliment an experienced (and well coached) group of returning players. This fine team play accompanied with the advent of women's volleyball at NJIT has made this sport not only popular, but closely scrutinized for NJIT students take their volleyball seriously.
Gymnastics is one of the few sports activities at NJIT where men and women participate together. During practices, the team is engaged in rigorous floor exercises. They have access to such equipment as parallel bars, a trampoline, a balance beam, and rings.

Many of the members have been active gymnasts for many years while some others have just recently taken an interest in the sport. The group welcomes all newcomers, experienced or not. The team has progressed and will continue to improve in the hopes of once again establishing gymnastics at NJIT on a team competitive level.
A friend of mine once came to an intersection, looked to the left for traffic, looked to the right, looked to the left again, saw that nothing was coming, stepped on the gas, and hit the car in front of him.
I once figured out that in five years (who said it was four) that I have been here, I must have traveled some 62,250 miles back and forth to school. This is based on about 166 trips each year (not counting false starts) at 75 miles round trip each time. That comes to 12,450 miles each year, better than four trips across the country. This of course does not deduct the miles accumulated by train since none of the various cars I have owned could hack the 12,450 miles each year.
Go placidly amid the noise and haste, and remember what peace there may be in silence. As far as possible without surrender be on good terms with all persons. Speak your truth quietly and clearly; and listen to others, even the dull and ignorant; they too have their story.

Avoid loud and aggressive persons, they are vexatious to the spirit. If you compare yourself with others, you may become vain and bitter; for always, there will be greater and lesser persons than yourself. Enjoy your achievements as well as your plans.

Keep interested in your own career, however humble; it is a real possession in the changing fortunes of time. Exercise caution in your business affairs, for the world is full of trickery. But let this not blind you to what virtue there is; many persons strive for high ideals; and everywhere life is full of heroism.

Be yourself! Especially, do not feign affection. Neither be cynical about love; for in the face of all aridity and disenchantment it is perennial as the grass.

Take kindly the counsel of the years, gracefully surrendering the things of youth. Nurture strength of spirit to shield you in sudden misfortune. But do not distress yourself with imaginings. Many fears are born of fatigue and loneliness. Beyond a wholesome discipline, be gentle with yourself.

You are a child of the universe, no less than the trees and the stars; you have the right to be here. And whether or not it is clear to you, no doubt the Universe is unfolding as it should.

Therefore, be at peace with God, whatever you conceive Him to be, and whatever your labors and aspirations, in the noisy confusion of life keep peace with your soul.

With all its sham, drudgery and broken dreams, it is still a beautiful world. Strive to be happy!

Max Ehrmann
The practice of architecture is a design and decision-making process aimed at solving an environmental problem; it is the thoughtful making of spaces which serve people.

The architecture program at NJIT considers a wide variety of environmental problems — certainly more than just buildings. The solution to a human environmental problem might be to build no buildings at all. The primary solution to the problem might in choosing a site, or opening undeveloped land to its best and most appropriate uses, or in keeping that land in its natural state. The scope of a problem might be that of a piece of furniture, a room, an entire neighborhood, a central business district, or an entire community or city. The designer's solution might be a long-range management plan or other guidelines for future growth. The key might be in preserving or adaptively using existing elements of the built environment which are currently misused or discarded. The design professions have never faced a greater challenge.

The Bachelor of Science in Industrial Administration program applies modern management principles to the administration of industrial organizations. Students may specialize in areas such as industrial relations, financial administration, and information management. The program can serve as an entry to a broad range of management positions in business and government in this complex technological age. The BSIA can also be used as the foundation for graduate study in business administration, management, or public administration.

The Man and Technology program is a liberal education for a technological age. It resembles a liberal arts program in the flexibility of its requirements. It differs from a liberal arts program because it has a strong technical component. The program is designed for those who want an understanding of the role of technology in society, but who do not necessarily plan to pursue a technical career.

Chemical Engineering

The chemical engineer is involved in the design and operation of plants that manufacture a wide variety of chemicals, including plastics, textile fibers, gasoline, and pharmaceuticals. The work of the chemical engineer can be very diverse, ranging from research to reduce air pollution to sales of a new detergent.

Chemical engineers will play an important role in resolving the energy crisis, because of their expertise in oil refining, recovery of oil from oil shale, the manufacture of synthetic fuels from coal, and the preparation and recovery of nuclear fuels.

Computer Science

Computer Science is the study of information; its structure, its representation and its utilization. This includes analysis, design, implementation and application of computer programs (software) and computer equipment (hardware) for developing computerized information processing systems in response to users' needs.

The use of computers can be characterized as augmenting a person's mental skills and intelligence. This is in contrast to other machines which are characterized as augmenting a person's physical skills and strength. The dramatic uses of computers in problem solving and in support of human cognitive processes has resulted in a change in the thinking of professionals in every discipline. Modern enterprises also are dependent on computers for automating their industrial and office procedures and practices. In order to keep pace with these sophisticated technological uses of computers, professionals in the computer field must understand and employ advanced scientific concepts in their work.

Civil Engineering

Civil Engineering involves the art and science of looking at problems with a view towards solutions. It deals with people and cities, producing clean air and water, providing for the disposal of wastes, and developing efficient transportation, housing and water supply systems. It is concerned with the planning, design and construction phases of a project, including energy, environmental, and economic considerations.

The Civil Engineering graduate is well prepared to enter the job market through federal, state, and municipal agencies, in the many consulting firms in the metropolitan area and throughout the country, or with the major industrial firms involved with aspects of planning design, construction or environmental control. Preparation is also given such that a student is able to enter the job market in research and development fields.

Electrical Engineering

Electrical engineering is a diversified and challenging profession concerned with the design, development, fabrication, and control of the electrical devices upon which our technological society depends. Electrical engineers utilize their knowledge of devices and systems design to be involved in a multitude of areas. A small sampling would include: integrated circuits, computers, environmental and biomedical instrumentation, energy conversion and distribution, space vehicle control, microprocessor's, and satellite communications. The curriculum provides a broad education in mathematics, the physical sciences, humanities and social sciences. On their foundation is built a depth of understanding in electrical engineering and related fields. In the senior year, a student may emphasize an area of his/her interest by selecting from a broad range of electives, including a systems sequence in communications, control, computers, power, or medical instrumentation. The aim is to educate an electrical engineer who can think analytically and creatively, work effectively, and communicate the result of his/her work clearly to others.

During the last decade there has been a strong trend toward further education in engineering technology and this has led to the establishment of the Bachelor’s programs in technology. A new occupational identity, the technologist, has come into being.

The technologist has a practical approach to the solution of everyday problems and works closely with the technician and the engineer or scientist as an important member of the engineering-scientific team.

Industrial/Manufacturing Engineering

The Industrial Engineering curriculum prepares engineers to design, improve, and install and operate integrated systems of people, materials, and facilities needed by industry, commerce, and society. Industrial Engineers solve the problems which arise in the management of enterprises by applying the principles of engineering science, product and process design, work analysis, human factors, and management science. Industrial Engineering leads to a wide variety of professional opportunities in industrial, commercial, and public service enterprises and to graduate study in Industrial Engineering, Business Administration, Law, and other fields.

Mechanical Engineering

Mechanical Engineering is concerned with the design, development, manufacture, and operation of a wide variety of energy and dynamic systems. Mechanical engineers employ their knowledge of materials, systems design and control, and production methods to develop complex systems such as aircraft, power plants, and combustion engines, to meet design constraints as well as safety and environmental protection requirements. Mechanical engineers are also involved in developing alternate energy sources, including fossil fuel, geothermal, wind, tide, solar, hydroelectric and nuclear power generation systems, in response to the world-wide energy shortage.

Space shuttle Challenger's liftoff is delayed as fuel problems plague the ship.

Marina Verola poses for Playboy and gets fired from her job with Dean Witter.

Reagan once again comes up with another better way to keep the middle-class student from attending college.

Sure glad we're graduating and don't have to put up with that guy any more . . .

. . . oh yeah, the real world . . .
Pat Jordan and "5000 RIDES"

What really is the best way to get to Newark? Unless your mother drives you in everyday, or you choose to reside here, well then, you are forced to commute! Then you must endure the gamut of traffic tie-ups, parking lot fiasco, break-ins, rip-offs, vandalism and expense just to spend a few blissful hours at NJIT. Now public transportation is no bargain either. Rarely can you find a 5 o'clock seat on the bus. There you are every afternoon, lurching home like so many other sides of beef; just hanging there looking at the next guy's armpit. The cockroaches are the least offensive vermin you are likely to encounter. At the rate fares are rising, Freddie Laker might start a bus line here soon. Sooner or later you start to ask yourself . . . "just how do I get to school and back with the fewest hassles and a minimum of effort?"

Well, I ride to Newark most everyday for free! The trip takes a lot less time than public transportation and only slightly longer than if I drove myself. But, I don't have to scrape the windshield, start the car, or hunt for a parking spot when I get here. Never have I had to deal with an arrogant security guard, never have I been ripped-off or vandalized. Most important of all; I have never helped finance Newark's most prolific form of architecture . . . the parking lot.

How do I do it?! I hitchhike! This often raises a lot of questions and accusations which can best be answered by looking at some numbers. To get to Newark I hitch on; a local street, a secondary road and a major highway. This order is reversed on the return trip. It generally takes one ride for each leg of the trip. We'll round it off to five rides a day, that's roughly one hundred rides a month. Now adding up a year at Seton Hall, a year at Montclair State and four years at NJIT and you come real close to 5,000 rides.

In all those rides I have never been robbed or threatened in any way. Never have I been sexually molested against my will, and the Police haven't bothered me at all. Sure when you are hitching you have to be careful, but not any more than if you were waiting for a bus or walking to your car alone.

Inclinate weather is always a bummer! No one likes to stand there with the wind blowing in one end and out the other and freezing everything in between. However no matter what the weather, I still wait less time for a ride than I would for a bus. Rotten weather tends to mitigate people's suspicion and I often get a ride quicker than I normally would. This covers just about all the questions your mother would normally ask; now let me explain why I like to hitch a ride.

Whether you are in Seattle Washington, Augusta Maine, or Newark New Jersey, the best reason for hitching is that you meet people . . . all kinds of interesting people. The number I used before was 5000, now that's a lot of folks who took time out of their schedule to help me literally down the road. All too often we lose sight of the people around us in Newark. How often on the train does someone offer you a cold brew? Or when does the bus driver say what the hell and drive you right to your front door? And tell me, how many people have you met driving to school by yourself? Hitching is probably the cheapest, most hassle free, and rewarding way for anyone to commute.

So how does one go about it?! Shave, cut your hair, show your books and have a sign. Know where you want to go and where you are going before you get in the car. So, thumbs up and take it slow . . . but take it!
Two roads diverged in a yellow wood,
And sorry I could not travel both
And be one traveler, long I stood
And looked down one as far as I could
To where it bent in the undergrowth;

Then took the other, as just as fair,
And having perhaps the better claim,
Because it was grassy and wanted wear;
Though as for that passing there
Had worn them really about the same.

And both that morning equally lay
In leaves no step had trodden black.
Oh, I kept the first for another day!
Yet knowing how way leads on to way,
I doubted if I should ever come back.

I shall be telling this with a sigh
Somewhere ages and ages hence:
Two roads diverged in a wood, and I -
I took the one less traveled by
And that has made all the difference.

—Robert Frost
I'M JUST STANDING IN THE DOOR WAY . . .
I'M JUST TRYING TO MAKE SOME SENSE . . .
I'M JUST WAITING ON A FRIEND . . .
So they say this is the end . . .

Mission complete
4-5 or 6 years to attain my goal
My mind is confused
My soul is content

I toss and turn with memories of past
And what may lie ahead

Friends, lovers, and knowledge
To face each task with strength and need

A computer age
A living age

Maybe you will miss me NJIT
I will miss the days of you

BUT . . .

The realities come to play on my thoughts
Money, jobs, maybe travel, maybe marriage, and life
What shall I do next
In this sheltered cove of four square blocks
My mind is distorted,
Unaware of what is to come

And all here; I will remember you

Graduation . . . Mission Complete

johanna jacobs
Hee Haw Grandma Lets Be Sneaky February 9 a night to remember

Thanks to everyone who made the pub a real success this year. Without your support it would have been impossible to get what we have today. So you are all invited back for beers on the house! Congratulations class of 1983. Good luck in all your endeavors! The Pub.

Hello Mr. James Konche! Listen why don't you stay on the golf course and leave all us transfer students alone! You have already done enough damage. "T" Arch

Thank you school of architecture and NJIT for some wonderful new studio spaces. I hope our following classmates will treat them well so that they are still in good condition when I come to take my licensing exam. 5 Arch

I am not sure how this year's yearbook has turned out but I think we should all be very grateful that the 1983 Nucleus staff made it possible for our class and future graduating classes to have a yearbook. Thanks to all of you LB.

Say hey Dotty! It was nice knowing you for one out of three years. I wish it could have been more. Hope to see you again. I like your hat.

Andy L keep that fiery hot little red under control. Hope your new married life goes well.

Thank you everyone for making this year's yearbook what it is. "It's you!" 83 Nucleus

To Dave Maxwell better known as D Max. Thanks for all your contributions everywhere! Especially those made to the yearbook. 83 Nucleus.

Does anyone know where I can get myself a job?

This must be as good as any place to advertise xerox copies made cheap! Class notes, resumes and anything else. Bulk orders only to keep costs down! The black market copier.

Who is this really...

I have often wondered . . . is it all really worth it???????????? Confused try Harri Krishna

Am I graduating? I'm not sure if I am ready for the world or not? Or is the world ready for me? They never taught us this in CIS202. CB

Hi Bill Ann and Jorge. Thanks for all the memories, yesterdays, today's, and tomorrows. Best wishes always Dan

My Mom's watching the whole thing on closed circuit TV. DEW

I guess it's time to say goodbye to all my friends and acquaintances. It's been a trying four years, five for some, six even seven for others. It seems no matter what we learn it's never enough to get you that $20,000 a year starting salary. Well goodbye all and good luck. Paa

Could you please repeat that again? . . . What part? . . . The part after, "Hello, my name is Karen Frank." MGS

Read the hockey news — brought to you by Pete Rossomunde Rich Seminara and Mike Pergola

Thanks a lot Wilma Needleman. It would have been impossible to get out of here without you. WOW

Monthly paper drive. Sponsored by the band parents of the Puxatauney High School Marching Anteaters. Second Saturday every month. 9 a.m. — noon.
El Well, what can you do
Hey Gwedo! Don’t bait me! 1st row seats always
Go luck to “Lost in the Shuffle” from crazy Ray
Waadusaay it’s crazy Ray
Mr. Boston won’t forget the house dicks & water
Mike Jim Vito Marc John Doug Steve & all the grad arch’s! Ray won’t forget you! Good luck & be good.

“Crazy Ray” will always remember the trip to Boston. Summer BP II and plywood, plywood, plywood. Life is what you make it, don’t let it get you down. REO
To a new beginning: Sigma Chi Epsilon. Good luck in the future.
I love you Mari
I adore you Javi my love
Sigma Pi — Number 1 — IFC softball and football champions. Intramural sports — Nashville ’83 — Portland ’82

Hey Ann Dan and Jorge. Thanks for making NJIT a little more bearable Keep in touch! WOW
What’s brown and sounds like a bell? Dung, Glenn

YQ know I really thought that more of you would have taken out one of these personal ads. I mean where else can you get such a wonderful bargain?! A chance to write all you want about any person you want at such a great price!!! If I had that kind of an opportunity I could come up with at least Twenty-three or more of these booster ads! So what can I say . . . I guess I just like to write, people are always telling me that I talk a lot. I hope they don’t mean that it’s too much. When given the pen in my hand I tell you there is just no stopping me!!!! I think that I would really like to write a book some day. I just have to come up with a good topic to write about. It seems that all the good ones have been taken, maybe not. I really want to thank the yearbook people for letting me have all this space to write in. Originally they had an eight line limit, but when they had this big open space left over they said I could fill up all of it. They told me that some people wanted to do a story on Kaddafi or Quadaghi or something like that. It seems that nobody knows how to spell it . . . Cadaphy that is. I think that my little segment is better anyway. But that’s just personal preference. Well that’s all the room I have!

Ah I can see you now bending over a hot stove. Only I don’t see the stove — Rufus
To Sigma Chi Epsilon & Alpha Sigma Tau May our sisterhoods live long & Prosper!!
If only there were some way that I could get my work published. I know I could make it big. All I need is that first break in the world. I mean there must be someone out there who wants me.

Hey Bill, I couldn’t sleep at all last night. Do Do Do-Do Do!
Gee wiz Beav, it sure was a great five years. Yeah Wally, but how come it took you seven? Quiet Beav, and hit the ball

Thanks to all of you who participated in this year’s personal ad section of the nucleus!
The Student Senate offers their best wishes and hopes for success and happiness to the 1983 Graduating Class....
CONGRATULATIONS TO OUR NEWEST MEMBERS

Welcome to The Alumni Association of New Jersey Institute of Technology. Upon graduation from the Institute, the Class of '83 brings our membership roster to total more than 20,000 alumni.

The doors of the A.J.J.A. Wilson Alumni Center are open to you at all times, and the facilities and services of the Association are available to you. During the years ahead you will receive literature about programs and events designed specifically for you and your fellow alumni. These activities range from social gatherings to educational seminars to special travel packages. We hope you will incorporate our calendar of events with yours, and join us for one of our future programs.

We wish you the best of luck and a gratifying career in the years ahead. And, as we hope you will join us for one of our future programs we hope you will share some of your future success with the Institute through a contribution to the Alumni Association's Annual Fund. Your gifts will help support:

- Scholarship Programs & Fellowships
- Athletic Awards
- The Newsletter
- Personal Growth Courses for Students
- Alumni Library Collection
- Educational Seminars
- Student Organizations
- Guest Lecturers

Again, welcome to your organization. Remember, The Alumni Association is your strongest link with the New Jersey Institute of Technology.
Congratulations to the '83 NUCLEUS Staff and best wishes to the Class of 1983 from Gordon Lawshe Delmar Yearbook Sales Representative
Good Luck
to the
Class of '83
