This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in Civil and Environmental Engineering Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact digitalcommons@njit.edu.

JOHN A. REIF, JR. DEPARTMENT OF
**CIVIL AND ENVIRONMENTAL
 ENGINEERING**

CE 495-Senior Design II (Geotechnical) Section: 101 - Fall 2018

Text: Foundation Analysis and Design by Joseph E. Bowles (1982, Hardcover)

Wight, James K. Reinforced Concrete, Mechanics and Design, 7th Edition, Prentice Hall, ISBN: 13:978-0-13-348596-7

Optional Text: ACI concrete Manual & AISC Steel Manual

Instructor: Professor Tai Luu

Office Hours: Tuesday, 9-10 PM or by appointment; E-mail: tll4@njit.edu

Prerequisites: CE 333, CE 432, CE 443 and CE 494.

A working knowledge of how to analyze geotechnical information such as boring logs and report. A working knowledge of a structural analysis to obtain load for geo-structural system. Some basic knowledge in the design of steel and reinforced concrete members.

Week	Topic	Homework to be Assigned in Class
1.	Introduction: Review of Geotechnical Problems and Foundation Design Concept	
2.	Review of Foundation Building Code and FHWA documents	
3.	REVIT session	
4.	Review of Shallow and Deep Foundation Design	
5.	Review of Retaining Wall/ Foundation Wall & Support of Excavation Design	
6.	Overview of Foundation System for Building	
7.	Design of Foundation Plans and Drawings	
8.	Design of Shallow Foot and Deep Footing and Drawings	
9.	Design of Foundation Walls and Drawings	
10.	Design of Support of Excavation & Drawings	
11.	Design of Support of Excavation & Drawings	
12.	Design of Tieback & Drawings	
13.	Design of Underpinning & Drawings	

14.	Final Project Submission: Design Report and Drawings	
-----	--	--

Grading: Grading will be judged from the final term project presentation, report, and design drawings.

Outcomes Course Matrix – CE 495 Civil Engineering Design II

Strategies, Actions and Assignments	ABET Student Outcomes (1-7)	Program Educational Objectives	Assessment Measures
Student Learning Outcome 1: Analyze, evaluate and design a civil or environmental engineering project (building foundation, treatment facility, etc.)			
Present an area specific civil and environmental engineering practice design problem.	1, 2, 7	1, 2	Final project report and periodic progress reports.
Discuss specific code, performance, cost, time, quality and safety objectives.	2, 4	1, 2	Final project report and periodic progress reports.
Work individually and within multi-disciplinary design teams.	3, 5	1, 2	Final project report, periodic progress reports, oral presentation.

CEE Mission, Program Educational Objectives and Student Outcomes

The mission of the Department of Civil and Environmental Engineering is:

- to educate a diverse student body to be employed in the engineering profession
- to encourage research and scholarship among our faculty and students
- to promote service to the engineering profession and society

Our program educational objectives are reflected in the achievements of our recent alumni:

1 – Engineering Practice: Alumni will successfully engage in the practice of civil engineering within industry, government, and private practice, working toward sustainable solutions in a wide array of technical specialties including construction, environmental, geotechnical, structural, transportation, and water resources.

2 – Professional Growth: Alumni will advance their skills through professional growth and development activities such as graduate study in engineering, research and development, professional registration and continuing education; some graduates will transition into other professional fields such as business and law through further education.

3 – Service: Alumni will perform service to society and the engineering profession through membership and participation in professional societies, government, educational institutions, civic organizations, charitable giving and other humanitarian endeavors.

Our Student Outcomes are what students are expected to know and be able to do by the time of their graduation:

1. an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Revised: 2/13/18
