This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in Chemical and Materials Engineering Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact [digitalcommons@njit.edu](mailto:digitalcommons@njit.edu).

1. **ChE 489 - Process Dynamics and Control**
2. **Credits and contact hours:** 4-0-3 (4 lecture hr/wk - 0 lab hr/wk - 3 course credits)
3. **Course Coordinator:** Dr. Sagnik Basuray
4. **Course Instructor:** Dr. Richard T. Cimino
5. **Textbook:** Process Dynamics and Control 4th Edition by Seborg, Edgar, Mellichamp and Doyle, John Wiley & Sons, Inc. ISBN: 978-1-119-28591-5
6. **Specific course information**

- a. **Description:** This course is an introduction to chemical process dynamics and control. Topics include analysis of the dynamics of open-loop systems, the design of control systems, and the dynamics of closed-loop systems. Control techniques and methodologies, used by practicing chemical engineers, are emphasized.
- b. **Prerequisites:** ChE 349; ChE 365
- c. **Required, Elective, or Selective Elective** - Required

## 7. Specific goals for the course

- a. A student should be able to:
  1. Model chemical engineering processes and analyze/predict their dynamics both for open- (without control) and closed-loop (with control) cases.
  2. Develop control strategies and select the most appropriate input to manipulate, and to tune controllers to meet/achieve specified process objectives.
  3. Work effectively in problem-solving teams and assess the performance of their teammates and themselves on the group efforts.
- b. This course explicitly addresses the following ABET student outcomes:
  - i. 1. An ability to identify, formulate, and solve complex engineering problems by applying principles of engineering, science, and mathematics
  - ii. 2. An ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety, and welfare, as well as global, cultural, social, environmental, and economic factors
  - iii. 5. An ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks, and meet objectives

## 8. Topics

1. Theoretical Models of Chemical Processes
2. Laplace Transforms
3. Transfer Function Models
4. Dynamic Behavior of First and Second Order Systems
5. Dynamic Behavior of Complex Systems
6. Feedback Controllers and Controller Instrumentation
7. Dynamic Behavior and Stability of Closed-Loop Systems
8. PID Controller Design and Stability
9. Feedforward and Ratio Control

# ChE 489: Process Dynamics and Control

## Fall 2019

**Instructor:** Dr. Richard T. Cimino, Senior Lecturer

Office: 387 Tiernan Hall, Phone: 973-596-5729, E-mail: cimino@njit.edu

**Class:** Tuesday 10 AM-12:05 PM and Friday 9:15-11:20 AM Room: Kupfrian 209

**Office Hours:** TBA

### Course Description and Requirements

This course is an introduction to chemical process dynamics and control. Topics include analysis of the dynamics of open-loop systems, the design of control systems, and the dynamics of closed-loop systems. Control techniques and methodologies, used by practicing chemical engineers, are emphasized.

**Pre-Requisites:** ChE 349; ChE 365

### Course Objectives

**Taking this course, a motivated student will learn to:**

- Model chemical engineering processes and analyze/predict their dynamics both for open- (without control) and closed-loop (with control) cases.
- Develop control strategies and select the most appropriate input to manipulate, and to tune controllers to meet/achieve specified process objectives.
- Work effectively in problem-solving teams and assess the performance of their teammates and themselves on the group efforts.

### Learning Materials

**Textbook Required:** Process Dynamics and Control (4th Edition) by Seborg, Edgar, Mellichamp and Doyle, John Wiley & Sons, Inc. ISBN: 978-1-119-28591-5

**Other Learning Material:** The textbook is the main source for preparing for classes and reading the textbook before each class is necessary. Additional materials will be posted on Canvas.

**Calculator:** A high-end calculator (TI-83, TI-84 or TI-84SE) is required for solving exam problems.

**Software:** Use of Matlab, Python or other computational software is strongly recommended for working on homework assignments.

## Course Outline

	Date	Topic and Reading (preliminary, subject to minor changes)
1.	Sep. 3-6	Introduction to process dynamics and control. Ch. 1.1-6
2.	Sep. 10-13	Theoretical models of chemical processes. Ch. 2.1-5
3.	Sep. 17-20	Laplace transforms. Ch. 3.1-5
4.	Sep. 24-27	Transfer function models. Ch. 4.1-3
5.	Oct. 1-4	Exam 1, Transfer function models cont'd. Ch. 4.1-3
6.	Oct. 8-11	Dynamic behavior of 1st order systems. Ch. 5.1-3
7.	Oct. 15-18	Dynamic behavior of 2nd order systems. Ch. 5.4
8.	Oct. 22-25	Dynamics of more complicated systems. Ch. 6.1-6
9.	Oct. 29 - Nov 1	Exam 2, Feedback controllers and control instrumentation. Ch. 8-9
10.	Nov. 5-8	Dynamic behavior of closed loop systems (project assigned). Ch. 11.1-3
11.	Nov. 12-15	Stability of closed loop control. Ch. 11.4-5
12.	Nov. 19-22	Stability cont'd, PID controller design & tuning. Ch. 11.4-5; 12.1-3
13.	Nov. 26	Exam 3.
14.	Dec. 3-6	PID cont'd, feedforward/ratio control (project due). Ch. 15
15.	Dec. 10	feedforward/ratio control. Ch. 15

## Assessment and Grading

**Homework:** Homework assignments will be given biweekly. The assignments will be posted on Canvas. The homework (including both reading and problems assignments) must be completed by Tuesday's class of the week following the assignment, unless otherwise is explicitly stated. No late homework will be accepted. Unless otherwise stated, all homework assignments must be completed as a team.

**Teams:** All assignments will require you to work in teams of 4-5 students, handing in one team solution per assignment. These assignments will be graded for correctness. You will be allowed to choose your teammates near the beginning of the course. If a student's name appears on a solution, it certifies that they have participated in solving the problems.

**Individual Accountability on Teams:** Solution outlines - Each team member must set up the homework problems individually before the team gets together to work out the details. Solution outlines will be required to be turned in to the instructor on select assignments, and will be checked for completion.

**Peer Evaluation:** You will use the Comprehensive Assessment of Team Effectiveness (CATME, [www.catme.org](http://www.catme.org)) to evaluate the teaming behaviors of yourself and your teammates. These evaluations will be incorporated into the assignment of final homework grades.

Upon evaluation, each student is assigned a multiplier related to how you and your teammates rated your performance. Your multiplier ranges from 0 to 1.05 and is related to the team's average evaluation score. If your multiplier = 1  $\Rightarrow$ , your rating is the same as the team average; < 1  $\Rightarrow$  your rating is less than the team average; > 1  $\Rightarrow$  your rating is greater than the team average. Your final team homework score is then weighted by this multiplier:

e.g. 90% total Team Homework score  $\times$  (1.05) = 94.5%

**Conflict Resolution:** Consult with your instructor immediately if a conflict arises that cannot be worked through by the team.

**Firing:** If a team member refuses to cooperate on an assignment, their name should not be included on the solution. If the non-cooperation continues, the team should meet with the instructor so

that the problem can be resolved, if possible. If no resolution is achieved the cooperating team members may notify the uncooperative team member in writing (by email, cc the instructor) that they are in danger of being fired. If there is no subsequent improvement on the next assignment, the team should notify the uncooperative team member in writing (by email, cc the instructor) that they are no longer with the team.

**Quitting:** Students who are consistently doing all the work for their team may issue a warning (by email, cc the instructor) that they will quit unless they start getting cooperation and a second memo (by email, cc the instructor) quitting the team if things do not improve.

Students who are fired or quit must meet with the instructor immediately, or they will get zeros for the remaining assignments. Students who quit will be allowed to join another team (cannot exceed 5 members) or to work the homework problems alone, by their own choice. If a student decides to work alone, they may not later ask to join a team. Students who are fired may work together (if there is more than one at any time). Otherwise, they must work alone.

**Quizzes:** Regular quizzes will be given based on the homework material, including both concepts and problems. The quizzes will be announced in advance. No make-up quizzes will be allowed. All quizzes will be closed book with no material allowed. The quizzes will take place at the beginning of the class, so being on time is strongly encouraged.

**Exams:** There will be three midterm exams (1.5 hours long) and one final exam (2.5 hours long). All exams will be closed book, however a handwritten sheet (double-sided, letter size) with materials used to prepare for midterm exams will be allowed. For the final exam two sheets are allowed. Shared or copied preparation sheets, as well as use of any electronic materials will be considered as a violation of academic integrity.

**Project:** There will be one team project requiring computer programming and a written report. Details of the assignment will be given well in advance of the due date.

Homeworks (team)	10%
Quizzes	10%
Project (team)	15%
Midterm #1	10%
Midterm #2	15%
Midterm #3	15%
Final Exam	25%
	100%

Percent	Grades
above 90%	A
transition	B+/B
class mean	B
transition	B/C+
transition	C+/C
below 55%	D/F

**Grading:** This course has both curved and absolute elements. The requirement for an A in this class is 90% or above. Students with less than 55% will receive an F. Grades of D are only very sparingly awarded, based on effort. Students whose grade average is the class mean will receive a B. Students whose grades cluster between the mean and 90% will receive a B or B+ based upon

the natural break in the sub-clusters, with the higher cluster receiving a B+ and the lower a B (may vary slightly based on class performance). Students whose grades cluster between the mean and 55% will receive a B, C+ or C based upon the natural breaks in the sub-clusters, with the highest (nearest the mean) receiving a B, the next highest a C+, and the lowest a C.

## Important Dates

- Midterm exam #1: October 1, 2019
- Midterm exam #2: October 29, 2019
- Midterm exam #3: November 26, 2019
- Final exam: between December 14 and 20, 2019
- Withdraw Deadline: November 11, 2019

## Policies

**NJIT Honor Code:** The NJIT Honor Code will be upheld and any violations will be brought to the immediate attention of the Dean of Students.

**Special Needs:** If you need accommodations due to a disability please contact Chantonette Lyles, Associate Director of Disability Support Services, Fenster Hall Room 260 to discuss your specific needs. A Letter of Accommodation Eligibility from the Disability Support Services office authorizing your accommodations will be required.

## Lectures

- Attendance is strongly recommended. Attendance sheet has to be signed at the beginning of each class. The examples discussed in the class are not necessarily from the main textbook and therefore missing a class will have consequences for preparation to quizzes and exams.
- Students must be present at the beginning of class. Being late to class may have consequences for the grade, since many of the classes will start from quizzes.
- Electronic devices other than calculators (laptops, tablets, cell-phones etc.) are not permitted during the classes. No audio or video recording is allowed.
- Cellphones should be turned off during both lectures and exams and not allowed under any circumstances.
- Laptops will be permitted only if necessary for class activities.
- No eating any time during the classes.

## Course materials, office hours and correspondence

- The course Canvas page is the main platform for delivering information about the course. All relevant course materials and assignments will be posted on Canvas, so a student should check it regularly.
- The students have to upload a professional-looking head shot for their Canvas profile.
- The students are strongly encouraged to attend Office Hours. Long questions, which require derivations will be discussed only during the Office Hours and will not be answered by email. Questions regarding grades can be discussed only during the Office Hours.
- E-mail and Canvas correspondence is intended only for quick questions. Questions which require a detailed discussion should be discussed in person during the Office Hours.
- All correspondence should be conducted in a professional style, using formal English.
- To assure quick response to your emails, please add “ChE489” in the subject of your emails.

- The instructor reserves the right not to respond to emails if the email does not have a greeting or a signature.

## Exams, Quizzes, Homeworks and Grades

- A letter grade is based on the final score, calculated using an Excel spreadsheet in accordance with the Tables given in this syllabus. The assigned letter grade is final and cannot be negotiated.
- A student can dispute the exam scores within a week after the announcement of the score. Exam scores can be disputed during the official Office Hours, not during class time or via email.
- The graded exams must be returned within a week to be saved for the department course assessment initiative. If a student does not return the exam, the grade for this exam is zeroed.
- Students will get zero for not coming to quizzes, exams, or any other course activity. If students miss an exam due to extreme circumstances (such as a medical problem), they need to notify the instructor via email before the beginning of the exam, and bring proof of the circumstance to the Dean of Student's office. Only in the case of official approval from the Dean of Student's office, may a make-up be given at the discretion of the instructor.
- A student must show as many details when solving a problem during an exam or a quiz. Not showing the work will cause losing points even if the final answer is correct.
- Partial credits can be given for solving the exams problems.
- No partial credit will be given if there is not enough details to follow.
- The final answer should be always evaluated with respect to its reasonability. No partial credit will be given if the final answer is wrong and unreasonable, and it is not stated.
- If a student misses a quiz due to a legitimate reason (absence approved by the Dean of Students), this quiz is excluded from the calculation, and the weights of the quizzes are scaled proportionally.
- Student handwriting must be legible in order to receive points.
- A student coming to dispute a grade has to bring completed homework sheets. No discussion of grades will be held without completed homework.

## Homework Format

- Staple a cover sheet (does not need to be engineering paper) with your group's names, the date and the homework assignment number as the first page of each homework set.
- Headers - The five boxes at the top of each sheet of a homework assignment must contain the following printed information from left to right:

Staple	Name	Course & Section No.	Date Due	Page number/total pages
--------	------	----------------------	----------	-------------------------

- Writing Mechanics - All homework should be carefully and legibly printed in pencil. If it can't be read, it can't be graded.
- Calculations - All homework calculations should be consistent with the following.
  - Include complete calculations for every calculation presented to demonstrate how results were obtained.
  - Include all units for each term in each equation. The units must balance.
  - Use the appropriate number of significant figures (often two or three) for all results (but use at least two extra significant figures in calculations).
  - Clearly indicate the final solution by boxing it in with a rectangle.

- Problem Order - Problems should clearly labeled, and presented in the order assigned (one, two, three, etc.).
- Problem Essentials - Problem solutions should include the following items in order.
  - Homework problem number listed at the beginning of the problem.
  - Brief problem statement. Provide bullet points of key aspects of the problem if it is longer than a few sentences.
  - The required information - the information or solution that we are looking for.
  - A straight-edge or carefully drawn diagram(s) that clearly illustrates the problem. Optional, but often needed.
  - The boxed solution of the problem including all required steps and calculations.
