This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in School of Applied Engineering and Technology Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact digitalcommons@njit.edu.
SYLLABUS AND COURSE INFORMATION

Course Name: Fundamentals of Network Communication Systems
Course Number: ECET 415
Course Structure: 2-2-3 (lecture hr/wk – lab hr/wk – course credits)
Course Description: The focus of this course is on network data communication systems and related protocols. Main topics include transmission media including coax, twisted pair, fiber optics, wired, and wireless media. The Transmission Control Protocol/Internet Protocol (TCP/IP) model as well as the Open System Interface (OSI) model are discussed with emphasis on the details of the TCP/IP model. Additional topics such as wired and wireless LAN, backbone networks, wide area networks, The Internet, networking security, and networking design are covered.

Prerequisites: ECET 214
Corequisites: None
Required, Elective, or Selected Elective: Elective
Required Materials: Text: CompTIA Network+ Cert. All-in-One Exam Guide
Author: Mike Meyers
Year: 2018
ISBN: 978-1-26-012238-1

Course Outcomes: By the end of the course students are able to:
1. List the components and types of data communication networks.
2. Describe and differentiate between the TCP/IP and the OSI models.
3. Understand the fundamental concepts of the application layer of the TCP/IP model and how it uses the rest of the networking layers.
4. Describe how data is transmitted over computer networks.
5. Explain how the physical layer works.
6. Explain the data link layer and its types of protocols.
7. Understand and describe the networking and the transport layers.
8. Differentiate between wired and wireless local area networks.
10. Differentiate among wide area networks and the technologies used to implement such networks for example: SONET, ATM, and Frame Relay.
11. Experiment and describe how voice over IP works.
12. Explain and differentiate among different data centers designs.
13. Make use of networking tools and command line tools.
Class Topics: Networking Protocols   Modulation
OSI Model               Network Security
Voice Over IP           Network Protocols

Student Outcomes: The Course Learning Outcomes support achievement of the following Student Outcomes from the ETAC of ABET Criterion 3 requirements.

Student Outcome d: An ability to design systems, components, or processes for broadly-defined engineering technology problems appropriate to program educational objectives.
Related Course Learning Outcomes: 13

Student Outcome f: An ability to identify, analyze, and solve broadly-defined engineering technology problems.
Related Course Learning Outcomes: 5, 7, & 10

Academic Integrity: Academic Integrity is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the academic code of integrity policy that is found at:
http://www5.njit.edu/policies/sites/policies/files/academic-integrity-code.pdf

Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office. Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a failing grade of F, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the Dean of Students Office at dos@njit.edu

Modification to Course: The Course Outline may be modified at the discretion of the instructor or in the event of extenuating circumstances. Students will be notified in class of any changes to the Course Outline.

Prepared By: Daniel Brateris
Course Coordinator: Daniel Brateris
