Part II: Course Description

1. **Course description:**

This course develops the skills necessary to analyze, design and manage the development of enterprise-scale information system solutions, incorporating contemporary methods and effective organizational and global project management practices. It focuses on technical business system analysis and design techniques, and covers key software engineering principles, methods and frameworks, including process models, agile and lean principles, project and risk management, estimation, requirements elicitation and analysis, modeling, system and software architecture, design patterns, and quality systems. Students will actively participate in discussions, review selected articles, participate in team exercises and collaborate on projects involving analysis and prototyping of applications addressing real-world problems and integrating current and emerging technologies.

For the latest course information go to [http://njit2.mrooms.net/](http://njit2.mrooms.net/)
The information below should help you plan and organize your preparation during the semester.

2. **Prerequisite courses and knowledge:**

- **Prerequisite course:** IS 631
- **Required background:**
  - The students are required to have knowledge of key information systems concept, software development life cycle activities, and project management issues.
  - Good understanding of data modeling techniques and database fundamentals is expected as well.
  - Good understanding of modern trends in business and information analysis, information technology, data modeling, object-oriented principles and agility are a plus.
  - Undergraduate software engineering courses provide a good foundation

3. **Outcomes expected upon the completion of the course:**

- Good understanding of classical and modern lifecycle models, including agile methods
- Hands on analysis and specification skills, using methods such as use cases, scenarios, and user stories
- Good understanding of project management functions, including risk analysis in global and collaborative projects
- Practical knowledge of estimation techniques
- Understanding of architecture and design activities as well as the impact and opportunities provided by modern architectures and infrastructures such as SOA and Cloud computing

IS 663
IS 663 SYLABUS

- Hands on modeling skills (UML, agile UML)
- Understanding the fundamentals of Quality Assurances and quality frameworks

4. Ways that students will be assessed throughout the course:

- Team project execution and deliverables - content, mastery of methods discussed in class and creativity; team work; research and analysis skills
- Discussions -- active participation and moderation of discussions; free sharing of ideas and information related to the discussion topics; systematic progress with paper reading assignments
- Individual assignments – content, understanding of methods discussed in class and their effective user or application to the assignment; research and analysis skills
- Class participation – open contribution to the discussions and exercises, sharing, collaboration
- Final exam – understanding of the course material and demonstrated effective application of the acquired knowledge and skills to solving practical problems

5. Required & Recommended texts:

- Lecture Notes
  Lecture notes are the basic course material for this class. The notes are made available on Moodle every semester.
- Text  
  - NJIT Bookstore or

- Articles and Discussion Supporting Materials
  For the list of readings check the Course Outline available on Moodle as well as Moodle Discussions forum.
- Books Recommended for Extra Reading
  - “Design Patterns / Elements of Reusable Objet Oriented Software,” Erich Gamma, Richard helm, Ralph Johnson, and Vlissides (known as the “Gang of 4” of “GOF”), 1994.

6. Required software/hardware:
Free and open software; NJIT supported tools and hosting environments.

7. Web resources:
See Class information on Moodle ([http://njit2.mrooms.net/](http://njit2.mrooms.net/))
8. **Contacting the instructor (including turn-around time for responses)**

Vassilka Kirova, Ph.D.
Department of Informatics
College of Computing Sciences
New Jersey Institute of Technology

**Emails:** vdkirova@gmail.com and vassilka.kirova@njit.edu

Please make sure to send your email to vassilka.kirova@njit.edu WITH A COPY to vdkirova@gmail.com!
Always use as a subject “IS-663” plus any details you would like to add.

**Mailing Address:**
Dr. Vassilka Kirova
Department of Informatics, CCS
NJIT, University Heights
Newark, NJ 07102

</table>
| Week 1| Course logistics and introductions  
Course introduction – topics, objectives, SAD/SE state of the art, gaps, industry focus and ongoing research  
Reading: 1st reading assigned  
Forming Groups for Course Project: teams formed; discussions about topics initiated                                                                                                                   | Text Book: CH 1  
Section 1.2: Software Engineering Ethics  
Supporting reading - The Dimensions of Software Engineering Success (see Moodle for details)  
General SE information: SIGSOFT Web: http://www.sigsoft.org/  
| Week 2| Process models: fundamentals  
Review of traditional process models, comparative analysis  
Project start:  
1) All groups finalized  
2) Teams work together to select topic and identify project’s key contributions  
3) Project proposal posted on Moodle  
Discussion: Evolution of software development practices; review of week’s one reading (paper 1 “Software Chronic Crisis”) – Is there really a crisis today?  
Text Book: CH 2  
| Week 3| Iterative-incremental process models – RUP and Scrum - comparative analysis (cont.)  
Project:  
1) Discussion and approval of project topics  
2) Market and competitors research  
In class discussion – projects  
Discussion (online): "No Silver Bullet" by Fred Brooks                                                                                                                   | Text Book: CH 2, 3  
Scrum Guides: http://www.scrum.org/Scrum-Guides  
Key Scrum Concepts: http://www.scrumalliance.org/pages/what_is_scrum  
Lean Software Development: A Tutorial, IEEE Software, Volume 29, Number 5 (September/October 2012) – see Moodle                                                                                     |
| Week 4| Product backlogs (PBL) and agile estimation  
Project meetings- Progress review                                                                                                                                                                                           | Product Backlogs (PBLs) and user stories (US) tutorials and examples, Mike Cohn, Scrum Alliance: http://www.mountangoatsoftware.com/agile/user-stories  
| Week 5| Requirements engineering: concepts, methods and standards  
Use Case models  
User Stories  
Discussion: RUP, Sacrum, agile principales                                                                                                                                                                      | Text Book: CH 4  
Alistair Cockburn’s Use Cases Reference Page: http://alistair.cockburn.us/Chapter-1  
Writing Effective Use Cases (see book extract- Chapter 1)                                                                                                                       |
| Week 6 | Project use cases review (all teams, in class discussion)  
Nonfunctional requirements  
Specifying the data aspects of requirements analysis (informal and BNF-based definitions)  
Project meetings  
Progress review | Text Book: CH 4 |
|---|---|
| Week 7 | Project management: planning, risk management, estimation  
Discussion: Large Scale Agile (tentative) | Text Book: CH 22, 23 |
| Week 8 | Architecture and design basics; software product lines; design quality.  
Project meetings  
Progress review | Text Book: CH 6, 7, 15, 18  
| Week 9 | Model-driven engineering: introduction to Object Oriented Analysis & Design (OOAD) concepts  
Exercises: Simple OOA models explained  
Project due date! | Text Book: CH 5, 7  
Introduction to Agile Modeling, Scott W. Ambler, 2005-2014  
http://www.agilemodeling.com/essays/introductionToAM.htm |
| Week 10 | Course project presentations! | Project presentation guidelines and requirements will be provided on Moodle  
Online discussion: Current Best Practices (discussion on Moodle)  
Every student is expected to find a paper, survey or a classification discussing one or several current best practices and to provide an outline and references on Moodle. All students are expected to comment on at least 2 postings by other students. |
| Week 11 | Design heuristics and/or patterns - invited talk (1.5 hours)  
UML Summary  
Exercises: Modeling; CRC Cards  
Discussion: (TBD)  
Start of individual assignment 2 | Text Book: CH 5, 6, 7  
Design Patterns (Dr. Dennis Manci, DMTS, Alcatel-Lucent) – one more talk by the same presenters  
Week 12

Trends in software architecture, technology and delivery: DevOps, cloud, AI/ML, Security, etc.

Online discussion: DevOps (see Moodle)
Discussion: Project retrospectives, team work, best current practices

Assignment 2 due date

Text Book: CH 6, 7, 15, 18
Reading: TBP

Week 13

Nov. 27

NO CLASS
Thanksgiving Schedule

Week 14

Tentative: Quality Management
Quality and continuous improvement frameworks (e.g., Lean Six Sigma, ISO 9000, CMMI, PSP, TSP, TQM, etc.)

Course summary
Discussion (Tentative): CMMI – is it still applicable?
Course wrap-up and Q&A, Exam Preparation

Text Book: CH 24
Reading (See Exam Preparation page in Moodle, for all papers, exercises and examples)

Week 15

Dec. 11

Final Exam preparation. Special topics reports.

Final Exam: Date (TBD)

Part V: Assignment Weighting (How Your Final Grade is Being Calculated?)

<table>
<thead>
<tr>
<th>Assessment Item</th>
<th>Percentage of final grade</th>
</tr>
</thead>
<tbody>
<tr>
<td>Team Project</td>
<td>40%</td>
</tr>
<tr>
<td>Individual Assignment</td>
<td>10%</td>
</tr>
<tr>
<td>Final Exam (Comprehensive, closed book)</td>
<td>50%</td>
</tr>
<tr>
<td>Extra Credits</td>
<td>Accumulated separately for active participation in class discussions, Moodle-based discussions, moderation, etc.</td>
</tr>
</tbody>
</table>

Grade policy (approximate): A (95%-100%), B+ (85%-94.9%), B (75%-84.9%)

Part VI: Delivery Mechanism

The following delivery mechanisms will be utilized:

☒ Face-to-face lectures
☒ Moodle: http://moodle.njit.edu
☐ NJIT on iTunes U: http://itunes.njit.edu
☐ Online resources (other than iTunes):
☐ Other (see below):

Part VII: Plagiarism and Academic Integrity

The approved "University Code on Academic Integrity" is currently in effect for all courses. Should a student fail a course due to a violation of academic integrity, they will be assigned the grade of “XF” rather than the “F” and this designation will remain permanently on their transcript.
All students are encouraged to look over the University Code on Academic Integrity and understand this document. Students are expected to uphold the integrity of this institution by reporting any violation of academic integrity. The identity of the student filing the report will be kept anonymous.

NJIT will continue to educate top tier students that are academically sound and are self-disciplined to uphold expected standards of professional integrity. Academic dishonesty will not be tolerated at this institution.

### Part VIII: Getting Help - General

The IST Helpdesk is the central hub for all information related to computing technologies at NJIT. This includes being the first point of contact for those with computing questions or problems.

There are three ways to contact the Helpdesk:
1. Call 973-596-2900. Monday - Friday 8 am - 7 pm.
2. Go to Student Mall Room 48. Monday - Friday 8 am - 7 pm

### Part IX: Getting Help - Moodle

In addition to the Helpdesk NJIT has a number of resources available to help you learn/use Moodle. Please be aware of the following:
