This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in Informatics Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact digitalcommons@njit.edu.
Instructor:
Matt Toegel (matthew.toegel@njit.edu)
Office Hours: M, T, W, Th 2:30 - 3:30 (Timely notice is preferred; Times subject to change)
Office: GITC 3420->3901C

Academic Integrity:
The work done is expected to be your own, any group work should clearly distinguish ownership of tasks. Use of snippets/material from others should be kept to a minimum and the source should be accredited where applicable. That being said, please also note the below:

*Academic Integrity is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the academic code of integrity policy that is found at:*

Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office. *Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a failing grade of F, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the Dean of Students Office at dos@njit.edu.*

Any violations of the NJIT Honor Code will be brought to the attention of the Dean of Students.

Objective:
This course will utilize your collective knowledge studied thus far. It'll be heavily project oriented simulating real-world work scenarios. You will work in a group on a complex project throughout the semester. It'll cover such skills related to System, Network, and Database Administration, Software design/engineering, and full stack development.

Grading:
Milestones (5): 10% (total)
Proposals: 5%
Change Log: 10%
Midterm: 15%
Midterm Milestone: 25%
Final Project: 25%
Final Exam: 10%

Materials/Technologies:
VirtualBox
Ubuntu
Github
Trello
A network router
No required textbooks; resources will be online
Laptop capable of running multiple VMs

Submission Criteria:
Project Proposal: The proposal will be the feature commitments of your project. You mention the goals/features and we’ll discuss the grading targets. You must upload the design document to Canvas, but you will be expected to bring one paper copy that we’ll annotate during our meeting. Any specific deliverables will be posted/shared to your Canvas thread. Without an approved proposal your project can’t be graded and will result to a 0.
You will be required to present your project along with the role and tasks you for which you were responsible.
Change Log: Your team is expected to submit a complete log of the activities of your group. This includes your Trello Board (Exported to JSON), All git repos and branch names, All Server Documentation, and Team Chat / Email Logs.

Professional Conduct:
This course is about learning to work in a professional team environment as well as the technical aspects. You are all expected to behave in such a manner both in and out of the classroom. You are expected to treat each other with respect and to refrain from any sort of personal misconduct. If there is conflict within a team, troubleshooting the issue is as much a responsibility of the team as any other deliverable. Any amount of disrespect or harassment will not be tolerated. See the NJIT Code of Student Conduct for further guidelines.

Late Policy:
Any projects that are submitted late will have a penalty of -1% per day late. No exceptions.

Project Guidelines:
Option A - Software as Service
You and your group are to identify a third party data source and build a service based upon that data. An example may include sports statistics, server status, market data, etc. It can be any source as long as it is legal to use and not generated by the team.
Option B - Mobile / Web Game
You and your group are to design a server backed game. You will be responsible for building the user tracking system, game state arbiters and databases. You will design the front end to work with web or mobile.

*Both projects will be simulating a multiple server cluster and setting up basic networking, communication, and security for your cluster.

Course Topics:
Software as a service
Project Management
ETL
Messaging Layers
Server Side Development
Change Management
Disaster Recovery

**Illustrative Schedule:**
Week 1: Introduction
Week 2: Milestone - Communication Layer Demonstration
Week 3: Project Proposals Due / Meetings Begin
Week 4: Milestone - Centralized Logging Functional
Week 5: Milestone - User Authentication Functional
Week 7: Midterm Milestone Due / Midterm Exams
Week 9: Milestone - 3 Tiered Cluster Due
Week 12: Milestone - Deployment System Functional
Week 14/15: Final Exam / Final Project Presentations / Change Logs Due

*Syllabus is subject to change, attend class to stay current.*
