Spring 2019

CE 210-002: Construction Materials & Procedures

Frank Golon
CE 210-002: CONSTRUCTION MATERIALS & PROCEDURES

Class Hours

**Tues & Thurs 10:00 AM - 11:20 AM** Colton Hall 416 (First Day of Classes Tues. January 22, 2019)

Office (Colton 261) at (973) 491-6900 or fg4@njit.edu

REQUIRED TEXT

OTHER REFERENCE

International Building Code (IBC 2015) and some of it supplements

*Construction Methods and Management* by S.W., Nunnally, 6th edition

Other files are assigned electronically as supplemental readings and will be e-mailed to class participants. These are denoted in course outline as Efiles.

*Prerequisites: HSS 101, CIS 101*

COURSE DESCRIPTION AND OBJECTIVES:

This course is a general comprehensive course on construction management and engineering in the Civil and Environmental Engineering Department at NJIT. It provides a broad understanding of the construction environment, the engineering and construction project management process and development process, with particular emphasis on planning, scheduling and cost management, which are key pillars of successful construction management. Also, the various tools and techniques and their interactions in the cost-effective development of constructed facilities, will be covered with practical illustrations and complemented by hands-on exercises and case studies.

LEARNING OUTCOMES

This course covers the environment, planning and management issues related to the modern approach of construction management. Using the cases and background materials, and methodologies covered, you should be able to:

- Analyze the feasibility of a construction project within resource constraints.
- Understand the basic structure of the construction industry, its environment, its various sectors and its overall relationship to the US and global economy.
- Devise the best organizational structure capable of carrying out the project.
- Understand engineering economic principles and apply the concepts of life-cycle management of a constructed project from the owner’s perspective (feasibility, financing, rate of return, contract management, quality control).
- Define the role of the general contractor, and understand the perspective of the GC as a business (estimating, bidding, project financing, cash flow management, materials and operations management).
- Understand the components of modern Professional Construction Management, and its relationships to other project participants as a form of project delivery.

* OSHA & Ethics will be covered each week specific to the topics
* Assignment sheet will be handed out in class and/or found in Moodle with due dates
* Actual Assignments may differ from list and can be changed by Instructor during Semester.
GRADING:

The overall term grade will be based on the following elements:

- Paper/Project Case Study: 17.5%
- Quiz 1: 10%
- Homework: 20%
- Class Participation/attendance: 10%
- Mid-Term: 17.5%
- Final: 25%

**Field Trip Reports**

Each student will submit two (2) reports, which can be 2 Parts of the same project on self-conducted field trips according to the following schedule:

1. **Project Administration:** In this first part, you will establish a construction project of your choice, or a section of the class field trip project:
   - a- The project background, scope, budget, staging and key milestones.
   - b- Understanding of the contract and project delivery system, relationships between parties, progress measurement/payment, change order management.
   - c- Description of the Construction Methods and Materials, and an engineering evaluation of a key project component (e.g. foundation design, etc.)
   - d- A Preliminary Work Breakdown Structure.
   Part 1 is due February 26 hand in at class.

2. **Project Planning,** including:
   - a- A detailed Work Breakdown Structure for all building systems and work elements or a building code evaluation used on site.
   - b- An MS Project CPM Schedule integrated with a cost estimate to enable cost/schedule integration.
   Part 2 is due April 16 hand in at class

**Outline and Content Elements for Each (Part of) the Field Trip Reports:**

1. **Introduction:** Identify the project, its location and the type of construction. Give the dates of your visitation. Identify the Owner, Contractor, and Architect-Engineer.

3. **Engineering Evaluation**: Present your own evaluation of the equipment, materials, and procedures being used on the project based on your knowledge from CE 210. Suggest alternatives that might improve job progress and efficiency. Discuss any environmental and safety aspects of the project.

4. **Appendix**: (If any) Present applicable codes, manufacturer’s literature, news articles, web links, etc.

5. **Figures and Photographs**: These or sketches are strongly recommended. Refer to all figures and photos in the body of the report.

Note: Make certain that you do not disrupt the ongoing construction activities during your visit. Always check first with the person-in-charge, usually the project superintendent, upon your arrival. Be courteous and remember, construction managers are busy people.

**Report Format and Grading**: The report should be word processed on 8.5 x 11 in. bond paper and electronic file submitted on Moodle. Correct grammar and spelling are required. Grading will be based on (1) Technical content, (2) Communication effectiveness including organization, grammar, spelling, clarity, and neatness. Suggested length of the text portion of each of the 2 Parts of the report is at least 4 pages.

NJIT Honor Code: the NJIT Honor Code will be upheld; any violations will be brought to the immediate attention of the Dean of Students.

CEE Mission, Program Educational Objectives and Student Outcomes

The mission of the Department of Civil and Environmental Engineering is:

- to educate a diverse student body to be employed in the engineering profession
- to encourage research and scholarship among our faculty and students
- to promote service to the engineering profession and society

Our program educational objectives are reflected in the achievements of our recent alumni:

1 – Engineering Practice: Alumni will successfully engage in the practice of civil engineering within industry, government, and private practice, working toward sustainable solutions in a wide array of technical specialties including construction, environmental, geotechnical, structural, transportation, and water resources.

2 – Professional Growth: Alumni will advance their skills through professional growth and development activities such as graduate study in engineering, research and development, professional registration and continuing education; some graduates will transition into other professional fields such as business and law through further education.

3 – Service: Alumni will perform service to society and the engineering profession through membership and participation in professional societies, government, educational institutions, civic organizations, charitable giving and other humanitarian endeavors.

Our Student Outcomes are what students are expected to know and be able to do by the time of their graduation:

1. an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies
