This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in Civil and Environmental Engineering Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact digitalcommons@njit.edu.
Syllabus:
CE 450 Urban Planning
Spring 2019
Section: 002

Meeting Time:
1:00 – 4:00 PM, Th

Meeting Location:
Colton 416

Instructor:
Dr. Liu
Office: 217 Colton
Phone Number: 5884

Office Hours:
Th: 10 AM – 1 PM or by appointment

Text Book:

Course Objectives
This course provides an opportunity for students to acquire entry level knowledge on urban planning, its principles, techniques, and uses. Topics include Land, Utilities, Transportation, and Residential areas - the basic elements of our built environment. This course emphasize practical knowledge and real world observations and student will be exposed to worldwide case studies based on cities, metropolitan areas, and other built environment.

Course Contents
1. Introduction

2. Land
   a. Land Form
   b. Maps
   c. The Constraints of Slope on Land Development
3. Utilities
   a. Water Supply and Distribution
   b. Wastewater Management
   c. Storm Drains
   d. Other Utilities

4. Transportation
   a. Transportation Planning
   b. Street Capacity
   c. Basic Highway Design
   d. Parking
   e. Transit Planning

5. Residential Areas
   a. Housing
   b. Residential Density
   c. Neighborhood Planning
   d. Street Design
   e. The Subdivision Process
   f. Single Family Subdivisions
   g. Multifamily Development
   h. Community Facilities

**Grading Policy:**

1. Home Work  
   25%
2. Mid-term Exam  
   25%
3. Presentation  
   10%
4. Final Project  
   30%
5. Attendance  
   10%

The NJIT Honor Code will be upheld, any violations will be brought to the immediate attention of the Dean of Students. Students will be consulted with by the instructor and must agree to any modifications or deviations from the syllabus throughout the course of the semester.

At a major university like NJIT, the faculty have obligations of diverse types. Some of the duties include involvement with ASCE, TRB, and other professional organization. In addition, research activities may require faculty to attend conferences, to present papers, and to participate in other activities. The instructor will make every effort to miss as few classes as possible. In case it can’t be avoided, she will arrange other alternatives to enrich the course and the learning experience.

CEE Mission, Program Educational Objectives and Student Outcomes

The mission of the Department of Civil and Environmental Engineering is:
- to educate a diverse student body to be employed in the engineering profession
- to encourage research and scholarship among our faculty and students
- to promote service to the engineering profession and society

Our program educational objectives are reflected in the achievements of our recent alumni:

1 – Engineering Practice: Alumni will successfully engage in the practice of civil engineering within industry, government, and private practice, working toward sustainable solutions in a wide array of technical specialties including construction, environmental, geotechnical, structural, transportation, and water resources.

2 – Professional Growth: Alumni will advance their skills through professional growth and development activities such as graduate study in engineering, research and development, professional registration and continuing education; some graduates will transition into other professional fields such as business and law through further education.

3 – Service: Alumni will perform service to society and the engineering profession through membership and participation in professional societies, government, educational institutions, civic organizations, charitable giving and other humanitarian endeavors.

Our Student Outcomes are what students are expected to know and be able to do by the time of their graduation:

1. an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies
