Recommended Citation

Bilgili, Ecevit, "CHE 260-002: Fluid Flow" (2021). *Chemical and Materials Engineering Syllabi*. 157.
<https://digitalcommons.njit.edu/cme-syllabi/157>

This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in Chemical and Materials Engineering Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact digitalcommons@njit.edu.

**ChE260 – Fluid Flow
Spring 2021
Otto H. York Department of Chemical and Materials Engineering
New Jersey Institute of Technology**

Instructor: Dr. Ecevit Bilgili, Associate Professor & Associate Chair for Undergraduate Study
Primary Contact: Phone: 973.596.2998, E-mail: bilgece@njit.edu
Webpage: <https://people.njit.edu/faculty/bilgece>

Teaching Assistant/Contact: Ms. Gulenay Guner (Email: gg357@njit.edu)

Mode of Teaching: Synchronous Online. All lectures, office hours, workshops, and review sessions are conducted synchronously via Webex meetings. The instructor will set up the meetings and share the links. All course materials and recorded lectures/office hours' discussion/workshops will be posted in Canvas, NJIT's Learning Management Platform.

Course Requirements: As the course is taught online and exams will be given online, students must have access to internet with high speed, a laptop/desktop PC with audio/ microphone, webcam, and a cell phone. Students who do not meet these requirements must contact Dean of Students ASAP and ensure they have all requirements met for this online course **before the semester starts**.

Lectures: Tue. & Th., 9:00-10:20 AM

Office Hours: Wed. 4:00-6:30 PM. Instructor is available for questions at other times via e-mail. For personal matters, an appointment must be made a week in advance for a Webex meeting, which depends on instructor's availability.

Course Description and Prerequisites

ChE260 – Fluid Flow (3;0;0), 3 credits. This course considers the principles of molecular and turbulent transport of momentum, particularly as they apply to pressure drop calculations in piping systems, packed columns, and other flow devices. Flow around submerged objects is also considered.

Prerequisites/Corequisites by Course: ChE 230 (prerequisite) as well as ChE 240 and Math 222 (corequisites). The student must satisfy the pre/corequisites for each course before registering. Please consult with your undergraduate adviser if you have any questions.

Prerequisites/Corequisites by Topic: Calculus (prerequisite), Material Balances (prerequisite), Thermodynamics (prerequisite), Energy Balances (corequisite), Differential equations (corequisite).

Course Objectives

1. Provide students with the knowledge and fundamentals of fluid mechanics as well as the tools/skills needed to design complex flow systems, including packed and fluidized beds
2. Develop skills in representing complex fluid phenomena via mathematical models and apply these models to solve engineering problems
3. Develop an awareness of the impact of processes-products on society, environment, economics, etc. and relate this impact to fluid mechanics

Learning Materials/Tools

Textbooks: Required: Geankoplis, C. J., "Transport Processes and Separation Process Principles," 4th Ed., Prentice Hall, NJ, 2003. Only hard/softcover; e-version is NOT acceptable.

Strongly Recommended: Schaum's Mathematical Handbook of Formulas and Tables, M.R. Spiegel (with J. Liu), 2nd Ed., McGraw-Hill. Newer editions/other co-authors are acceptable.

Other Learning Materials: Instructor's online class notes give a summary of the material and have been posted on the Canvas course webpage. Please print them and bring them along with your book and calculator before coming to each lecture. You will take additional notes on them during the lectures. You are responsible for all the materials covered in the class, not just in the notes. Also, the recorded webex sessions will be uploaded to the respective Module in Canvas whenever they are made available to the instructor by Webex.

Required Software: MS Office, Matlab, Adobe Reader. All software can be downloaded from NJIT IST webpage. Student Mall labs and CME department PC lab have the software. Students have already access/accounts in Webex and Canvas. If you do not have access, please contact NJIT Help Desk as soon as possible. CamScan app or a similar app on your cellphone is required to capture images of your work on HW sheets and exam sheets and generate a single PDF file for submission to Canvas including that during an online exam/quiz.

Calculator: A high-end calculator TI-83, TI-84, or TI-84-SE is required. In general, all students are asked to refer to user manual and web resources for their calculators. The instructor will give support for the above models only. You may use other calculator models, but the instructor will only direct you to online resources and you must learn how to use them on your own.

Requirements for Remote Learning: Access to a computer or laptop with high speed internet connection, webcam, microphone, and audio is required. Note that if you have any issues with accessibility to Webex/Canvas and webcams, you must resolve them as soon as possible by contacting the Dean of Students and/or the chair of the Chemical and Materials Engineering department. Inaction on your part is not an acceptable excuse for any issues you may face during the online lectures, quizzes, and exams.

Course Outline

<u>Week</u>	<u>Topic</u>
1	Introduction, Fluids, Fluid Statics, Pressure, Differential (Shell) Momentum Balance on Static Fluids, Manometry, Head
2	Molecular Transport, Newton's Law of Viscosity, Shear Viscosity, Non-Newtonian Fluids, Gradients, Introduction to Laminar and Turbulent Flow, Reynolds Number
3-4	Macroscopic Mass-Energy Balances, Continuity Equation, Mechanical Energy Balance, Bernoulli equation, Friction Losses in Mechanical Energy Balance Exam #1
5	Momentum Balance in Cylindrical Shell, Hagen-Poiseuille Equation, Momentum Balance in Falling Film, Navier-Stokes Equation, Velocity Distribution in Laminar and Turbulent Flow, Entry Length
6-8	Design Equations for Laminar and Turbulent Flow in Pipes, Friction Factor, Mechanical Energy Losses in Pipes and Fittings Exam #2
9	Pumps and Compressors
10	Measurement of Flow, Venturi, Orifices, Pitot Tube
11	Macroscopic Momentum Balance, Forces on Pipes
12	Flow Past Immersed Objects
13	Flow in Packed Beds Final Exam

Assessment/Grading

Exam #1: 20%; Exam #2: 20%; Final Exam: 30%; Group Project: 15%, Quiz/HW: 15%

Quiz/HW Assignments: A quiz has twice the weighting of a HW. Once assigned (announced in class and/or via Canvas), a HW is due the following week during class time, unless otherwise indicated. You can ask HW related questions as well as any questions regarding the class material and project during the office hours or by sending e-mails directly to the instructor.

Your performance will be evaluated on an absolute scale and not relative to the performance of other students in the class. Final letter grades will be awarded based on your weighted composite average score (see weighting above) and a table of composite score vs. letter grade (see below). Attendance may affect your final grade, as described under Policies/Norms.

<u>Score</u>	<u>Grade</u>
90–100	A
81–89.9	B+
73–80.9	B
67–72.9	C+
61–66.9	C
55–60.9	D
<54.9	F

Important Dates (Please mark on your calendar, see Timetable document for details**)**

Exam # 1 — Feb. 16; **Exam # 2** — Mar. 30, **Final Exam** — May 07-13, Day TBD by registrar

Project Report Due — Apr. 29 (Class Time)

Cancelled Lectures — Mar. 16 & 18 (Spring Recess)

Make-up for snow-related cancellations will be held during common hours (Converged Class Only). **Common Hours** — W 2:30-3:50 or F 11:30-12:50.

Last Day to Withdraw — Apr. 05 (M), no special permission to withdraw thereafter.

Tentative Review Session — May 05 (Wed.), 4:00-6:30 PM

Reading Days — May 05-06

Academic Integrity

Academic integrity/honesty is of paramount importance. The NJIT Honor Code will be upheld. Violations will be brought to the immediate attention of the Dean of Students (DofS). This professor takes academic integrity very seriously. He has taken many cheating cases to the DofS, and the students have been penalized for cheating.

Special Accommodations

If you need accommodations due to a disability, please contact Chantonette Lyles, Associate Director of The Office of Accessibility Resources and Services, Fenster Hall Room 260 to discuss your specific needs.

Contact Dean of Students (DofS) and provide evidence for any extenuating circumstance regarding absence from an exam, accessibility issues regarding remote learning, etc. While the instructor should be informed by you, the instructor must also receive email from the DofS before making a decision.

Specific Goals for the Course

The student will be able to

1. define classes of fluids and bring examples of them
2. work with the units of fluid dynamics variables and convert between different unit systems
3. formulate and solve general fluid static/manometry problems using momentum balance
4. define viscosity, formulate and solve simple viscosity problems
5. classify different types of fluids based on their rheological behavior
6. explain laminar and turbulent flows and calculate Reynolds Number
7. formulate and solve overall mass and mechanical energy balance equations for selected fluid dynamic systems
8. formulate shell mass and momentum differential equations for the selected fluid dynamic system
9. formulate and solve the continuity and momentum differential equation mathematically
10. predict mechanical friction losses based on correlations for different components of pipe systems
11. formulate and solve overall mass and mechanical energy balance equations for flow in pipe systems
12. describe different types of fluid moving devices and their characteristics
13. size (design) a pump based on the use of overall mass and mechanical energy balance equations for flow in pipe systems
14. describe different types of flow measurement devices
15. formulate and solve overall mass and mechanical energy balance equations for different flow measurement devices
16. formulate and solve overall mass and mechanical energy balance equations for flow past immersed objects
17. formulate and solve overall mass and mechanical energy balance equations for flow in packed beds
18. solve equations numerically using appropriate software and writing appropriate code
19. write an effective 6-page report including figures and references, describe, analyze, and discuss a technology/process that had a major impact on society or at a global scale either positively or negatively or both, and speculate on ways that negative results might have been avoided, while clearly explaining how the impact specifically relates to the concepts/equations/approaches of fluid statics and fluid flow or rheology of the fluids, suspensions, etc. involved.

This course explicitly addresses the following student outcomes: 1, 3, 4, 7

Policies, Rules, and Expectations during the Lectures/Course

- You are strongly recommended to attend ALL webex lectures and office hours. Since the lectures cover many abstract/complex concepts and calculations, even missing a single lecture would cause you to spend enormous time to recover. In this course, there has been a significant **correlation between absenteeism and non-satisfactory performance: W-F-D grades.**
- Please be present before the lecture starts or at least ON TIME. Under no circumstances, you should distract your peers and the instructor.
- You are responsible for all information given in lectures (oral, written or handouts, posted notes, audiovisual materials), whether you are present or not during the lectures.

- For in-class lectures only, as per ChE department policy, no internet-enabled devices including cell phone/laptop are allowed in class! No video/audio recording and no eating any time during the lecture. Laptops will only be used when instructed so for few lectures (to be announced).
- For in-class lectures only, make sure to pair with other students to join in-class group activities (few minutes each). You are expected to participate when asked by the instructor.
- You are expected to behave, communicate, and interact with the instructor and peers with respect and dignity as a candidate, professional chemical engineer.
- **Expectations:** ATTEND all lectures, ASK questions, PARTICIPATE in group activities, SHOW UP during official office hours, DO homework, REVIEW/WORK ON/SOLVE the material of the previous lecture before next class. You are expected to READ the class/posted notes and covered sections of Geankoplis, WATCH the webex videos, BRING the printed notes to class along with the calculator, and TAKE additional notes during the lectures. The printed notes are summary, and are not meant to be complete.
- For success, you have to WORK OUT all derivations and examples in the notes/in-class examples on your own after each lecture. In case of questions, please see the instructor during Office Hours or pose questions in the class. Do not delay this to the exam week.

Rules, Policies and Expectations about Course Materials, E-mails & Office Hours

- The instructor highly encourages all students to show up during the official office hours. You may attend the office hours individually or together with your study and project groups. You must make your best attempt to meet the instructor during these hours.
- Course notes, HW assignment, HW solutions, etc. have been (will be) posted on the Canvas course webpage. Critical announcements will be made through that system as well. You are required to visit the website on a daily basis to get recent homework assignments/solutions and other relevant announcements. You are expected to bring the relevant notes, the book, and calculator to the class and to take additional supplementary notes in the class.
- E-mail is usually intended for quick questions, not for asking about the whole solution of complex problems. You are first encouraged to check Canvas for information. Then, you should discuss the problems among your peers or study group. In the end, you are welcome to use the Office Hours fully. It is best for students to engage with the instructor during the Office Hours and use e-mail for clarifying questions.
- The instructor reserves the right not to respond to e-mails. Improperly written e-mails with lax attitude will not be replied. If e-mailed questions require more than 5-10 min to respond, students may be asked to contact the instructor during the office hours. Sometimes, instructor will share student questions with the whole class, keeping the anonymity of the student intact. This will help all class to benefit from such inquiries.
- Instructor-originated information is communicated via e-mail or posted on Canvas (check daily). **You are recommended to print and/or store all e-mails sent by the instructor in a separate CHE260 folder.**

Policies & Expectations about Grades/Exams & Specific Instructions for In-Class Exams

- A letter grade is based on the weighted average score and a table of average score-letter grade categories. Letter grade will be assigned automatically by an Excel code (no emotions attached). The assigned letter grade is FINAL without subject to negotiation!
- You must plan, study hard and do well in exams/HW/project if you want to get a good grade in this course. Instructor will NOT change letter grades to accommodate any special circumstances of students. The student will get the letter grade he/she deserves.

- You can dispute the exam scores within a week following the announcement of the score. You cannot dispute your prior exams or HWs after one week or at the end of the semester! After first review of the dispute, if the score is not modified, but the student is unconvinced and asks for an additional review, then he/she assumes the possibility of instructor reviewing the whole exam paper and removing points as well as giving points.
- You may be asked to return your graded exam papers within a week for the sake of a department-wide course assessment initiative.
- No extra credit will be allowed (no need to ask) under any circumstances. Group project is meant to give you the opportunity to raise your letter grade; use it well.
- Exams are open HARDCOPY notes–books. ELECTRONIC SOURCES ARE NOT ALLOWED. You are required to bring notes, the required textbooks, other books of your choosing along with your calculator.
- Use of cell phone, smart watch, laptop, or similar in in-class exams/quizzes is considered “cheating”.
- You have to write legibly while showing all work; otherwise, loss of points is likely. If two solutions are given for a problem including the correct and incorrect ones, you may be assigned 0 points. You are required to erase or cross out the incorrect solution.
- Students get 0 for no-show to exams. Make-up exams (**no make-up quizzes**) may only be given under extreme circumstances (e.g., major close-family emergency, serious accident or acute medical problem) at the sole discretion of the instructor. Students bear the responsibility of due proof and documentation to the Dean of Students. It is the student’s responsibility to inform the instructor and Dean of Students ASAP.
- Read the Study Guide to be posted before each exam and attend the Review Session (if there is one). Some exam questions can be of multiple-choice type or of essay type requiring verbal explanations, while most others will be derivation type with symbolic manipulation and pure calculation type requiring calculators.
- Show all work, otherwise no partial credit means you cannot simply skip fundamental equations and important intermediate steps during a calculation/derivation. You may lose significant points even if the final answer is correct.
- Read the posting in Canvas titled “Professor, why do I lose points in exams?” before exams to learn about potential sources of errors/mistakes students commonly make and how to avoid them.
- There will be no tolerance for unit conversion and calculation mistakes; you will lose significant points.

Specific Rules Governing Online Exams/Quizzes

These rules specifically apply to online exams and quizzes conducted via Webex–Canvas. They are generally applicable and subject to change for a specific exam/quiz in view of the needs of the instructor to ensure that potential misconduct is prevented. Hence, the rules below are general, and additional more stringent rules may be imposed during the proctoring of a specific exam/quiz, which will be announced to the students.

1. Please sign in Webex, turn webcam/camera on, and mute so that you start the exam at the designated time promptly. Make sure you open Canvas/Quizzes window on your PC/laptop.
2. The webcam/camera must show your desk and papers and the upper half of your body. Your cell phone must be positioned to capture a video of your screen for each question. So, please optimize the position of the webcam/camera and cell phone before the exam/quiz starts. **You are required to submit the video of your PC/laptop monitor for each question WITHIN 15 MIN at the conclusion of the exam via email to the instructor (bilgece@njit.edu).**
3. Put all materials needed (notes, books, calculator, cell phone, water, etc.) on the desk and visit the restroom before the exam as leaving your desk during the exam is considered cheating.

If you have any medical condition that requires a visit to the restroom during the exam, please inform the instructor before the exam indicating the medical situation.

4. If you have questions during the exam, please use chat functionality in Webex and address it to the instructor, not to the whole class. If you chat with any other student, this will be considered cheating. If the question pertains to the whole class, instructor will respond to everybody in chat or by voice.

5. Make sure your webcam remains turned on during the whole exam; do NOT turn it off!

6. The submission of your exam papers to Canvas starts with generation of a PDF file of your answer to an exam question through its upload to/submit via the Quiz question page of Canvas. Please make sure you write your name on all answer sheets and put page numbers. Also, when you download the pdf from your email account to your laptop/pc, please click on the file name and change the name of the pdf file from what CamScanner app generates to Lastname Midterm Q1, e.g. Then, submit the renamed pdf file to Canvas.

7. The use of cell phone is reserved for recording a video of your monitor and scanning your solution (PDF file) within the last 5 min of each question period. The use of laptop/pc is reserved for using Webex/webcam, reading the question on Canvas, and uploading your solution in PDF to Canvas (last 5 min only). Student's use of cell phone/PC/laptop beyond the above manner and other than the last 5 min of upload time will be flagged for misconduct investigation.

8. If you finish a question early, please go over the solution because there are many potential mistakes you may have made or you should check the satisfaction of initial/boundary conditions and dimensional homogeneity. Toward the last 5 minutes of time allotted for each question, just spend the time for submission. There will be NO EXCUSE and the student will get 0 score if he/she cannot submit the solution PDF via CanvasQuiz during the allotted time for each question. Please use the allotted time for each question wisely, watch the time counter in Canvas and allow for 5 min for upload.

9. If your PC/laptop web connection is slow and you had connection problems in the past, go to campus and use designated areas in the campus for taking the exam online. There is no excuse for connection problems. Only for truly extenuating circumstances, please send the PDF of your solution to my email (bilgece@njit.edu), not to Canvas, directly within the time allotted. You will be asked to explain the situation. At his own discretion, the instructor may not accept student's submission and assign 0 score or ask student to retake another exam with different questions.

CRITICAL NOTES TO STUDENTS FOR ONLINE EXAMS

1. **Do NOT use scrap paper.** Write directly on the answer sheet that you plan to scan and submit. Your scanned papers will be used for grading, not your scrap papers. Please put your name and page number on each answer sheet; scan them in the right order.

2. **SHOW ALL WORK, do not skip anything!!!** Write down all fundamental equations and show all intermediate steps of your derivation. You will lose a lot of points if your equations/intermediate steps are missing. **You will get minimal score for each step whether your answer is correct or not if steps leading to the answer are missing.**

3. **If the intermediate steps are missing or worse incorrect, yet your final answer is correct, first you will get minimal partial scores, close to 0 points per step, and additionally your paper will be flagged for misconduct investigation.**

4. You must send full videos (for each question) of your laptop/PC screen after the exam. You will receive 0 otherwise. The videos serve your proof that you have not used your laptop/PC for anything other than reading the question and submitting the solution PDF.

STUDENTS ACCEPT FULL RESPONSIBILITY FOR 0 EXAM SCORE FOR THEIR FAILURE TO FOLLOW ANY OF THE ABOVE INSTRUCTIONS.

Policies and Expectations about Homework–Project

- Once assigned, HW is due the following week during class time, unless otherwise indicated. Due date is the last date of submission.
- Solved problem sets have already been posted. You are strongly recommended to go over these solved problems as they will help you to solve HW problems that will be posted during the semester and prepare you for the Quiz/Exam. You are allowed to discuss HW problems with peer students, but cannot copy/use their solution directly.
- Late assignments will get 0 independent of the circumstances. All HW must be submitted via Canvas Assignment tool.
- Homework and exam papers must be written legibly in an organized, structured fashion. You are responsible for potential loss of points due to sloppy, unclear, or illegible work on the papers.
- All information about **the Group Project** was communicated in the “**Project Description, Expectations, Deadlines, and Grading Rubric**” document via Canvas. **You must read this document ASAP**, follow the instructions therein, form a group, identify a project topic/title, note the deadlines, and contact the instructor during the office hours with your peer group.

Expectations for the Use of Mathematics, Calculators, and Excel/Matlab

- Mathematics is the language of engineers and the course will rely on some background in Calculus and Differential Equations. You are required to read the “Math Review” document and improve on the gap areas identified in your Pre-Requisite Knowledge Quiz. Keep a Math Handbook such as Schaum’s Mathematical Handbook handy for study and exams. While going through the course material and solving quantitative and theoretical problems, try to relate to the math in the “Math Review” and Math Handbook.
- In exams, you are required to use high-end calculators for solution of a non-linear equation, linear regression, and spread-sheet calculations. There are examples that make use of TI-83-83-84+SE calculators in the course material. The instructor also provides resources in Canvas, and you must consult with the user manual and web sources of your specific calculator model.
- You will lose significant points if you are unable to solve a first-order ordinary differential equation (ODE), linear homogeneous second-order ODE with constant coefficients, integrate/differentiate a function analytically, and use your calculators for the aforementioned tasks. So, please consider these math-based expectations seriously.
- Toward obtaining analytical solutions, you should consult with your Math Handbook, Math Review Document, Calculus Textbook, and a Differential Equations Textbook. For numerical problems, you will use your calculator and Excel/Matlab.
- You are recommended to use online resources as well as documents posted on the course Canvas webpage about the use of calculators, Matlab, and Excel. The instructor will demonstrate each tool with examples, but you must learn the basics on your own.
