Course Description/Overview

IE 334. Engineering Economy and Capital Investment. 3 credits, 3 contact hours (3;0;0).

Introduction to the principles of engineering economics for utilization and evaluation of capital investments, including time value of money, depreciation, cost of capital, life cycle cost, net present value, and payback. Consideration of decisions involving multiple choice replacement, uncertainty, and risk.

Prof. Bengu introduces these fundamentals of engineering cost analysis concepts with emphasis on problem solving and utilizing computer tools. A high level usage of spreadsheet is recommended and serves as the vehicle to illustrate many of the concepts, especially for the Analysis of cash flows including cost, revenue, and benefits that occur at different times and in various forms. Evaluation of engineering projects using equivalent worth, benefit-cost, and rate of return, statistical risk are illustrated. Upon Completion of the Semester project, the students build a personal loan analysis tool that can be used in later days after school.
**Course Policies**

1. **Attendance is mandatory.** A student who misses > 5 classes will be dropped, without credit. Getting to class late or leaving early counts as half an absence.
2. **You must bring the textbook to class.** The text illustrates examples and homework that will be done in class.
3. **Homework and projects** must be submitted in hard copy at the beginning of class on the due date. They will not be accepted late except for special circumstances (such as jury duty or medical problem), for which you must provide documentation. Semester project will consist of a written and oral presentation. All submitted work (including exams) must include your name and student ID.
4. **Plagiarism** will result in zero credit for the assignment and/or an XF grade in the course.
5. **Cell phones** must be turned off during class and are not permitted during exams.
