This Syllabus is brought to you for free and open access by the NJIT Syllabi at Digital Commons @ NJIT. It has been accepted for inclusion in Civil and Environmental Engineering Syllabi by an authorized administrator of Digital Commons @ NJIT. For more information, please contact digitalcommons@njit.edu.
# Course Syllabus

**CE 360: Sustainable Civil Engineering Materials**  
**John A. Reif, Jr. Department of Civil and Environmental Engineering**

## Course Information

- **Fall 2019**
- **Title:** CE 360, Sustainable Civil Engineering Materials
- **Section:** 001
- **Class Location:** Kupfrian 106
- **Meeting Times:** Monday and Wednesdays: 1:00 PM – 2:20 PM
- **Credit Hours:** 3 Credits

## Instructor

- **Matthew P. Adams, Ph.D.**
- **Office:** Colton 237
- **E-mail:** adams@njit.edu
- **He/His Pronouns**
- **Office Hours:**
  - Mondays: 2:30 PM – 4:00 PM
  - Wednesdays: 10:30 AM – 12:00 PM
  - Open door policy (if the door is open, come on by).
  - By appointment, skype appointments also available

## Office Hours

- **Prerequisites:** CHEM 121 or 125 and MECH 237 (with a grade of C or better) This course will provide instruction on engineering materials used in the construction of civil engineering projects. Additionally, the fundamentals of sustainability and sustainable design within the context of civil engineering will be discussed. The engineering properties of aggregates, wood, metal, portland cement concrete and asphaltic concrete and design of these materials will be covered. These materials will be used to discuss sustainability concepts and design within civil engineering.

- **Academic Integrity:** is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the academic code of integrity policy that is found at: [http://www5.njit.edu/policies/sites/policies/files/academic-integrity-code.pdf](http://www5.njit.edu/policies/sites/policies/files/academic-integrity-code.pdf)

- **Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office.** Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a failing grade of F, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the Dean of Students Office at dos@njit.edu.
Course: Description. The course provides instruction on civil and construction engineering materials used in the construction of civil engineering projects such as pavements, bridges, buildings, retaining walls, tanks, etc. Additionally, the fundamentals of sustainability within the context of civil engineering will be discussed. In particular, the course concentrates on the engineering properties of aggregates, wood, metals, portland cement concrete (PCC) and hot-mix asphalt (HMA) as well as the mixture design of PCC and HMA, as well as other advanced civil engineering materials. These materials will be used to discuss sustainability and sustainable design within civil engineering contexts.

Learning Outcomes
Upon completion of this course, students will be able to:

1. Define sustainability in their own words and relate how sustainability is defined in the context of new construction as well as renovation and rehabilitation.
2. Demonstrate concepts of life-cycle analysis including economic and sustainability aspects and apply these concepts to sustainable construction.
3. Identify key material properties important to the successful application of aggregates, asphalt concrete, portland cement concrete, wood and metals to a variety of civil works.
4. Specify aggregates, concrete and asphalt mixtures, metals, and wood for typical construction applications including the use of appropriate standards (i.e. ASTM) for testing and specification of said materials.
5. Design a PCC mixture and an HMA mixture using sustainability concepts that will be durable and meet the requirements of a particular construction project.

Required Reading Materials
Required

B. Pavement Guide Interactive: http://www.pavementinteractive.org/ (free internet resource)

C. Additional course reading materials will be posted on the Moodle course website throughout the term.

Additional
Virtual Superpave Laboratory: http://training.ce.washington.edu/VSL/
Portland Cement Association: www.cement.org
American Concrete Institute:  www.aci-int.org

**Attendance Policy**
Students are expected to be on time for class, and to remain in class during the entire period. Chronic lateness or leaving of class for extended periods of time will result in a reduction of a student’s participation grade. Regular attendance in class will greatly increase your ability to perform well on the exams, final project, and class assignments. If a student must miss more class or an exam please contact the professor to discuss the issue at least 24 hours **prior** to missing the class.

**Homework Assignment Requirements and Grading**
Homework assignments will be posted on the course website regularly throughout the term. Students will have at least 7 days to complete homework assignments from the date they are posted. Homework assignments are due by the end of class on the due date. Homework will be collected and graded in the following manner:

- All problems will be checked for completeness.
- One question, chosen at random, will be graded.
- All homework will be graded for professionalism and legibility

Method of Collection. All homework will be collected via Canvas, the course website. Homework must be submitted by 11:59:59 PM on the day it is due. Please note the following items:

- Homework must be turned in as 1 single file. If you need to combine typed responses with hand written calculations, you must scan in your hand-written portions, and import them into the word document that you have typed or inserted as a page into the PDF.
- It is the student’s responsibility to ensure that the homework is correctly uploaded to Canvas. If you are having issues with Canvas contact the Canvas help desk, the professor is not able to help with IT/Technical issues.

Homework assignments are expected to look professional and be legible. Up to 25% of each homework will include points for meeting the criteria below. Homework assignments will meet the following requirements:

- Each page will have a header that includes student name, date, course number, assignment, and page number.
- All homework will be completed on fresh paper with clean edges (not ripped out of a notebook). Engineering paper is preferred when completing assignments by hand.
- Written sections have correct grammar and spelling.
- Handwriting is legible
- Each question is clearly labeled, with the given information, what you are required to answer, and the solution clearly marked.

An example of a correctly formatted homework is attached at the end of this syllabus.

**Grade Determination**
The course grade will be determined using the following point breakdown:

 Homework Assignments  125 Points total (5 Homework assns. at 25 points each)  
 Quizzes and In Class Exercises  100 Points total (10 items at 10 points each)  
 Exam 1  75 Points total  
 Exam 2  75 Points total  
 Final Examination  125 Points total  

All grades will be rounded to the nearest tenth. Letter grades will be determined using the following breakdown of grade percentage:

<table>
<thead>
<tr>
<th>Grade</th>
<th>Points Range</th>
</tr>
</thead>
<tbody>
<tr>
<td>A</td>
<td>450 points and above</td>
</tr>
<tr>
<td>B+</td>
<td>425 – 449 points</td>
</tr>
<tr>
<td>B</td>
<td>400 – 425 points</td>
</tr>
<tr>
<td>C+</td>
<td>375 – 399 points</td>
</tr>
<tr>
<td>C</td>
<td>350 – 375 points</td>
</tr>
<tr>
<td>F</td>
<td>Below 350 points</td>
</tr>
</tbody>
</table>

**Course Quizzes and In-class Exercises**
Twelve quizzes or in-class exercises will be given throughout the term. Quizzes will either be pop quizzes given in the first 15 minutes of class. If you are late to class you will not be able to make up the quiz. **Quizzes cannot be made up unless the student gives at least 24 hours prior notice of missing class.** Quizzes will be graded out of 10 points. The lowest quiz grade will be dropped at the end of the term.

In-class exercises will generally take up a significant time in class and will be done in pairs or groups. Exercises will not be scored, but instead students will get full credit for completing the exercise. The lowest in-class exercise grade will be dropped at the end of the term.

**Course Exams**
Three exams will be given during the term, two during the term and a final exam. Each regular exam will be out of 75 points, and the final exam will be out of 125 points. The final exam will be cumulative of the whole semester. Exams will include both a multiple-choice portion, calculation sections, and a written response portion.

**Late Homework and Missed Exam Policy**
Assignments must be submitted by 11:59:59 PM on the date they are due through Canvas.njit.edu. Any assignment turned in later than this time be considered late unless prior arrangements are made with the instructor. **Late homework will be accepted up to 24 hours after the assigned due date and time for a loss of 50% of the total possible points.** No late homework will be accepted after 24 hours.

Missed examinations will not be allowed to be made up without prior consent from the professor. If a student will be missing an examination please contact the professor at least 24 hours prior to missing the exam.

If you have an emergency and miss an exam or quiz without prior approval from the professor, you must contact the Dean of Students who will review your case and determine whether an absence should be allowed.
Plagiarism and Copying

Plagiarism and copying will *not* be tolerated in this course. While it is encouraged that you discuss and work together on homework problems, direct copying of each-others answers is prohibited. Many homework assignments require written responses and each student is expected to write their own response.

Plagiarism is also not tolerated. Plagiarism is when you use someone else’s words, ideas, assertions, data, or figures and do not acknowledge that you have done that (i.e. pass it off as your own original work). If you use the words, ideas, or even phrases from someone else or any published material you must:

1. Use quotation marks around the copied words or phrases AND cite the source; or
2. Paraphrase or summarize using your own words and phrases AND cite the source.

Any charts, graphs, data, images, or numerical information used from another source or published material must also be cited. If you are not familiar with citations please work with an NJIT librarian to learn more. This is all material that should have been covered in your first-year writing courses.

Student assignments will be submitted via a plagiarism detection software. Any evidence of plagiarism, copying, or cheating during exams, on homeworks, or on quizzes will result in an immediate grade of zero for the assignment and will be reported to the dean of students. A second instance of this will result in a failing grade for the course.

Extra Credit

No extra credit will be offered for the course. The grading is designed to give students many chances to do well in the course. For more information why extra credit is not offered please review the following website:

https://www.math.uh.edu/~tomforde/NoExtraCredit.html

Course Reading

You are required to complete the readings for the course prior to each class. The reading has been chosen to support the material given in class and should be given full attention.

Course Schedule

Note: Course schedule is tentative and may change throughout the term. The instructor will communicate any changes. Class time is provided for topics of particular interest to students, or to provide additional instruction if class is running behind. Students wishing to suggest a special topic should speak with the instructor. (Note: Lectures are based on a twice per week, 1.5 hour class period, 14 week schedule). The course schedule is attached at the end of this syllabus.
Students with Disabilities
NJIT is committed to providing students with documented disabilities equal access to programs and activities. If you have, or believe that you may have, a physical, medical, psychological, or learning disability that may require accommodations, please contact the Coordinator of Student Disability Services located in the Center for Counseling and Psychological Services, in Campbell Hall, room 205, (973) 596-3414. Further information on disability services related to the self-identification, documentation and accommodation processes can be found on the webpage at: (http://www.njit.edu/counseling/services/disabilities.php)

Academic Dishonesty and Student Conduct
(Taken from the NJIT Academic Integrity Code linked below)

New Jersey Institute of Technology is an institution dedicated to the pursuit of knowledge through teaching and research. The university expects that its graduates will assume positions of leadership within their professions and communities. Within this context, the university strives to develop and maintain a high level of ethics and honesty among all members of its community.

Imperative to this goal is the commitment to truth and academic integrity. This commitment is confirmed in this NJIT University Code on Academic Integrity. The essential quality of this Code is that each student shall demonstrate honesty and integrity in the completion of all assignments and in the participation of the learning process. Adherence to the University Code on Academic Integrity promotes the level of integrity required within the university and professional communities and assures students that their work is being judged fairly with the work of others. For more information on the code of academic integrity please see: http://www.njit.edu/education/pdf/academic-integrity-code.pdf

Class Behavior
While the university is a place where the free exchange of ideas allows for debate and disagreement, all classroom behavior and discourse should reflect the values of respect and civility. Behaviors that are disruptive to the learning environment will not be tolerated and students will be asked to leave the classroom. This includes but is not limited to aggressive behavior, sleeping in class, disruptive behavior, use of electronic devices for activities not related to coursework, racist, sexist, ableist, or homophobic language, and inappropriate or crude language.

Any student that prefers to use a particular pronoun should let the professor know so that this can be accommodated.

E-mail communication with the professor and each other is expected to be professional. Any e-mails received by the professor that are not professionally formatted and stated will not be answered. Examples of professional e-mail etiquette can be found at the following links:
Legal Disclaimer
Students’ ability to meet outcomes listed may vary, regardless of grade. They will achieve all outcomes if they attend class regularly, complete all assignments with a high degree of accuracy, and participate regularly in class discussions.

This syllabus is subject to change at the discretion of the instructor throughout the term.
### Objective 1. Define sustainability in their own words and relate how sustainability is defined in the context of new construction as well as renovation and rehabilitation.

<table>

CEE Mission, Program Educational Objectives and Student Outcomes

The mission of the Department of Civil and Environmental Engineering is:

- to educate a diverse student body to be employed in the engineering profession
- to encourage research and scholarship among our faculty and students
- to promote service to the engineering profession and society

Our program educational objectives are reflected in the achievements of our recent alumni:

1 – Engineering Practice: Alumni will successfully engage in the practice of civil engineering within industry, government, and private practice, working toward sustainable solutions in a wide array of technical specialties including construction, environmental, geotechnical, structural, transportation, and water resources.

2 – Professional Growth: Alumni will advance their skills through professional growth and development activities such as graduate study in engineering, research and development, professional registration and continuing education; some graduates will transition into other professional fields such as business and law through further education.

3 – Service: Alumni will perform service to society and the engineering profession through membership and participation in professional societies, government, educational institutions, civic organizations, charitable giving and other humanitarian endeavors.

Our Student Outcomes are what students are expected to know and be able to do by the time of their graduation:

1. an ability to identify, formulate and solve complex engineering problems by applying principles of engineering, science and mathematics
2. an ability to apply engineering design to produce solutions that meet specified needs with consideration of public health, safety and welfare, as well as global, cultural, social, environmental and economic factors
3. an ability to communicate effectively with a range of audiences
4. an ability to recognize ethical and professional responsibilities in engineering situations and make informed judgments, which must consider the impact of engineering solutions in global, economic, environmental and societal contexts
5. an ability to function effectively on a team whose members together provide leadership, create a collaborative and inclusive environment, establish goals, plan tasks and meet objectives
6. an ability to develop and conduct appropriate experimentation, analyze and interpret data and use engineering judgment to draw conclusions
7. an ability to acquire and apply new knowledge as needed, using appropriate learning strategies

Revised: 2/13/18
Question 1

Given:

List the resources and emissions associated with the life of a washing machine. Provide both the resources input to each step, and the emissions output. Your answer should be in the form of a cycle diagram as done in class.

Solution:

Figure 1 presents the inputs and outputs from the manufacture of a washing machine.

![Diagram of washing machine life cycle](image)

Figure 1: Inputs and outputs from the manufacture of a washing machine [Ashby 2014]

This image shows the resources required and emissions from each step of the manufacture of a washing machine. Significant greenhouse gas emissions can be noted during the material production and product manufacturing phase and energy is required as an input for each phase of the cycle.
